Value Chain Experience: Reflections from the East African Community (EAC)

Beru Lilako

Trade Policy and Regional Integration Expert

2024 tralac Alumni Conference
Introduction

Value chains refer to the series of activities and processes involved in the creation, production, and delivery of goods and services to consumers.

They include everything from the acquisition of raw materials and inputs, through various stages of production, to the distribution and marketing of the final products.

They can lead to several notable benefits in the EAC region like;

• Efficiency and Competitiveness
• Trade Facilitation
• Job Creation and Economic Growth
• Technology Transfer and Innovation
• Diversification and Specialisation
• Infrastructure Development
• Policy Coordination
Understanding Value Chains in the EAC

- **Agriculture:** Employs a significant portion of the population and contributes to food security and livelihoods. Activities include crop cultivation, livestock farming, fisheries, and forestry. Value addition processes such as processing, packaging, and distribution are integral part.

- **Manufacturing:** Includes textiles and apparel, food processing, pharmaceuticals, automotive, and construction materials. This involves the transformation of raw materials or semi-finished goods into finished products through production processes like assembly, fabrication, and packaging.

- **Services:** Plays a crucial role in the economy, encompassing a diverse range of sectors such as finance, transportation, telecommunications, tourism, healthcare, and education. Service value chains involve the delivery of intangible products or services to consumers, often requiring infrastructure, technology, and skilled labor.

- **Trade and Commerce:** Involves the movement of goods and services across borders and beyond. Includes activities such as transportation, logistics, warehousing, wholesale, and retail. Trade value chains facilitate the exchange of goods and services between producers, traders, and consumers.
Key Components of Value Chain

• **Producers:** They are the entities responsible for creating or manufacturing goods and services. This category encompasses a diverse range of actors, including farmers, agribusinesses, manufacturers, artisans, and service providers.

• **Suppliers:** They play a critical role in providing the inputs, materials, and resources necessary for value chain activities to take place. This include raw materials, equipment, machinery, technology, and services.

• **Distributors:** Are responsible for transporting, storing, and delivering goods and services from producers to consumers. This includes logistics companies, wholesalers, retailers, and other intermediaries involved in the movement and marketing of products.

• **Consumers:** Are the ultimate beneficiaries of value chain activities, as they purchase and consume goods and services produced.
Value Chain Diversity in the EAC

a) Agriculture

- **Coffee Value Chain**: Ethiopia, Uganda, Tanzania, and Rwanda are renowned for their coffee production. The coffee value chain involves several stages, including cultivation, harvesting, processing, and export.

- **Tea Value Chain**: Kenya is a major player in the global tea market, known for its high-quality tea production. The tea value chain involves tea cultivation on large estates or smallholder farms, processing in tea factories, and auctioning or direct sales to international buyers.

- **Horticulture Value Chain**: Kenya and Tanzania have thriving horticulture industries, exporting flowers, fruits, and vegetables to international markets. The horticulture value chain encompasses activities such as crop production, post-harvest handling, packaging, transportation, and export.
b) Manufacturing

- **Textiles Value chain**: Ethiopia, Tanzania and Kenya have emerging textile industries focused on producing garments, fabrics, and apparel. The textiles value chain involves cotton cultivation, ginning, spinning, weaving or knitting, dyeing, cutting, sewing, and finishing.

- **Automotive Value Chain**: Tanzania and Kenya have nascent automotive industries, with assembly plants producing vehicles and components for domestic and regional markets. The automotive value chain includes activities such as importation of vehicle kits or parts, assembly, testing, distribution, and after-sales services.
c) Services

- **Tourism Value chain:** Tanzania, Kenya, and Rwanda are renowned for their diverse tourism attractions, including wildlife safaris, beaches, cultural heritage sites, and eco-tourism destinations. Tourism generates revenue, creates jobs, and promotes conservation efforts within the region.

- **Logistics Value Chain:** EAC countries serve as key transit corridors for trade and transport within the region and beyond. The logistics value chain involves activities such as freight forwarding, warehousing, transportation (road, rail, air, and maritime), customs clearance, and distribution.
Integration Efforts in the EAC

a) Common Market Protocol

- **Facilitation of Free Movement of Good and Services:** The Common Market Protocol, which came into effect in 2010, aims to establish a single market within the EAC, allowing for the free movement of goods, services, capital, and labor.

- **Harmonization of Policies and Regulations:** Creates a conducive business environment for value chain integration by reducing trade barriers, streamlining customs procedures, and ensuring consistency in regulatory frameworks.

- **Promotion of Cross-border Investments:** Encourages cross-border investments by providing a predictable and transparent regulatory framework. Facilitates the establishment of regional production facilities, distribution networks, and service provision centers.
b) Establishment of Regional Economic Zones (REZs)

- **Creation of Specialized Economic Zone:** As designated areas for promoting industrial development, manufacturing, and trade facilitation. These zones provide infrastructure, incentives, and support services to attract investment and facilitate value chain integration.

- **Facilitation of Cross-Border Trade Investment:** Serve as hubs for cross-border trade and investment, offering streamlined customs procedures, simplified regulatory frameworks, and efficient logistics infrastructure.

- **Integration with Global Value Chains:** Strategically positioned to link member states with global value chains, leveraging regional advantages in terms of location, resources, and labor. By attracting multinational corporations and facilitating trade and investment flows.
Innovation and Technology in Value Chains

Examples of technological innovations that are transforming value chains within the EAC

a) Digital Platforms for Market Access
   • Jumia: An e-commerce platform that operates in Kenya, Uganda, Tanzania, and Rwanda. It provides an online marketplace where businesses can sell their products to consumers across the region.
   • Twiga Foods: A technology-driven agricultural supply chain platform based in Kenya. It connects smallholder farmers with informal retailers through a mobile-based marketplace.

b) Agrotech Solutions for Smallholder farmers
   • FarmDrive: A Kenyan fintech startup that leverages data analytics and mobile technology to provide credit scoring and financial services to smallholder farmers.
   • M-farm: A mobile-based platform in Kenya that provides market information, agronomic advice, and collective marketing services to smallholder farmers.
Inclusive Development in Value Chain

a) Empowering Smallholder Farmers

• **Poverty Reductions**: Empowering farmers by providing them with access to markets, finance, technology, and knowledge.

• **Food Security**: Supporting farmers by improving their productivity, resilience to climate change, and access to inputs and resources.

• **Sustainable Agriculture**: Promoting sustainable agriculture practices among farmers, including agro-ecology, conservation farming, and organic production. By adopting sustainable practices, farmers can enhance soil fertility, conserve natural resources, and mitigate the negative impacts of climate change.
b) Promoting Gender Equality

- **Women Empowerment:** By ensuring that women have equal access to resources, opportunities, and decision-making power within agricultural value chains.

- **Access to Resource:** Address gender disparities in access to land, credit, inputs, and extension services, which are often skewed against women in the region. By providing women with equal access to resources, training, and support.

- **Women Leadership and Representation:** Decision-making processes, producer organizations, and value chain governance structures. By creating opportunities for women to voice their opinions, influence policies, and participate in collective action.
Conclusion

Overall, value chains play a critical role in driving economic growth and regional integration within the EAC. This is by promoting efficiency, expanding markets, attracting investment, creating jobs, fostering technology transfer, enhancing resilience, and encouraging policy coordination.

In summary, leveraging lessons learned is essential for enhancing value chain development for sustainable development in the EAC region. It helps to avoid past mistakes, optimize resource allocation, tailor strategies to local contexts, promote innovation, build stakeholder capacity, foster collaboration and partnerships, and facilitate monitoring and evaluation for greater impact and sustainability.
Asante sana!
