tralac Trade in Services Data Report

John Stuart

Introduction

This data report contains a rich selection of visualised data on the extent of trade in construction services within Africa and between Africa and the rest of the world. The narrative is restricted to captions to the figures and to citation of data sources. This report is intended to provide an understanding of this sector for non-quantitative specialists and others interested in the state of trade-in-services in Africa. It is one of a set of 8 reports, including six other sectoral reports and a framework report providing data definitions and classifications as well as detailed data sources. The framework report also provides 'bigger picture' of African services trade data with consolidated services trade data presented for the same categories (where possible) as the data reports.

Outline

This report contains the following sections:

1. Services trade data – both multilateral and bilateral services trade data for Africa for the nominated sector, by country and REC. Services trade *Mode 1* and *Mode 2* are covered by this data. Note that for the bilateral trade flow figures, a non-connected country node indicates that trade levels for this country fall below the threshold, not that they are zero.
2. Foreign Affiliates Statistics (FATS) – an indication of *Mode 3* services trade in data proxying economic activity by foreign-affiliated companies in Africa within the sector. The figures use *employment* numbers in foreign affiliates in the designated sector since it is the most widely-available variable indicating economic activity.
3. Export value-added of services – mapping of the value added of services inputs into primary and secondary sector exports. This helps visualise the true extent of the trade in services in Africa as it exposes the services content of primary and secondary trade.
