INTRODUCTION

Doing Business sheds light on how easy or difficult it is for a local entrepreneur to open and run a small to medium-size business when complying with relevant regulations. It measures and tracks changes in regulations affecting 11 areas in the life cycle of a business: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, paying taxes, trading across borders, enforcing contracts, resolving insolvency and labor market regulation. *Doing Business 2016* presents the data for the labor market regulation indicators in an annex. The report does not present rankings of economies on labor market regulation indicators or include the topic in the aggregate distance to frontier score or ranking on the ease of doing business.

In a series of annual reports *Doing Business* presents quantitative indicators on business regulations and the protection of property rights that can be compared across 189 economies, from Afghanistan to Zimbabwe, over time. The data set covers 47 economies in Sub-Saharan Africa, 32 in Latin America and the Caribbean, 25 in East Asia and the Pacific, 25 in Eastern Europe and Central Asia, 20 in the Middle East and North Africa and 8 in South Asia, as well as 32 OECD high-income economies. The indicators are used to analyze economic outcomes and identify what reforms have worked, where and why.

This regional profile presents the *Doing Business* indicators for economies in Southern African Development Community (SADC). It also shows the regional average, the best performance globally for each

indicator and data for the following comparator regions: East Asia and the Pacific (EAP), Economic Community of West African States (ECOWAS), European Union (EU), Middle East and North Africa (MENA) and Organization for the Harmonization of Business Law in Africa (OHADA).. The data in this report are current as of June 1, 2015 (except for the paying taxes indicators, which cover the period January–December 2014).

The *Doing Business* methodology has limitations. Other areas important to business—such as an economy's proximity to large markets, the quality of its infrastructure services (other than those related to trading across borders and getting electricity), the security of property from theft and looting, the transparency of government procurement, macroeconomic conditions or the underlying strength of institutions—are not directly studied by *Doing Business*. The indicators refer to a specific type of business, generally a local limited liability company operating in the largest business city. Because standard assumptions are used in the data collection, comparisons and benchmarks are valid across economies. The data not only highlight the extent of obstacles to doing business; they also help identify the source of those obstacles, supporting policy makers in designing regulatory reform.

More information is available in the full report. *Doing Business 2016* presents the indicators, analyzes their relationship with economic outcomes and recommends regulatory reforms. The data, along with information on ordering the *Doing Business 2016* report, are available on the *Doing Business* website at <http://www.doingbusiness.org>.

THE BUSINESS ENVIRONMENT

CHANGES IN *DOING BUSINESS 2016*

As part of a two-year update in methodology, *Doing Business 2016* expands the focus of five indicator sets (dealing with construction permits, getting electricity, registering property, enforcing contracts and labor market regulation), substantially revises the methodology for one indicator set (trading across borders) and implements small updates to the methodology for another (protecting minority investors).

The indicators on dealing with construction permits now include an index of the quality of building regulation and its implementation. The getting electricity indicators now include a measure of the price of electricity consumption and an index of the reliability of electricity supply and transparency of tariffs. Starting this year, the registering property indicators include an index of the quality of the land administration system in each economy in addition to the indicators on the number of procedures and the time and cost to transfer property. And for enforcing contracts an index of the quality and efficiency of judicial processes has been added while the indicator on the number of procedures to enforce a contract has been dropped.

The scope of the labor market regulation indicator set has also been expanded, to include more areas capturing aspects of job quality. The labor market regulation indicators continue to be excluded from the aggregate distance to frontier score and ranking on the ease of doing business.

The case study underlying the trading across borders indicators has been changed to increase its relevance. For each economy the export product and partner are now determined on the basis of the economy's comparative advantage, the import product is auto parts, and the import partner is selected on the basis of which economy has the highest trade value in that product. The indicators continue to measure the time and cost to export and import.

Beyond these changes there is one other update in methodology, for the protecting minority investors indicators. A few points for the extent of shareholder governance index have been fine-tuned, and the index now also measures aspects of the regulations applicable to limited companies rather than privately held joint stock companies.

For more details on the changes, see the "What is changing in *Doing Business*?" chapter starting on page 27 of the *Doing Business 2016* report. For more details on the data and methodology, please see the "Data Notes" chapter starting on page 119 of the *Doing Business 2016* report. For more details on the distance to frontier metric, please see the "Distance to frontier and ease of doing business ranking" chapter in this profile.

THE BUSINESS ENVIRONMENT

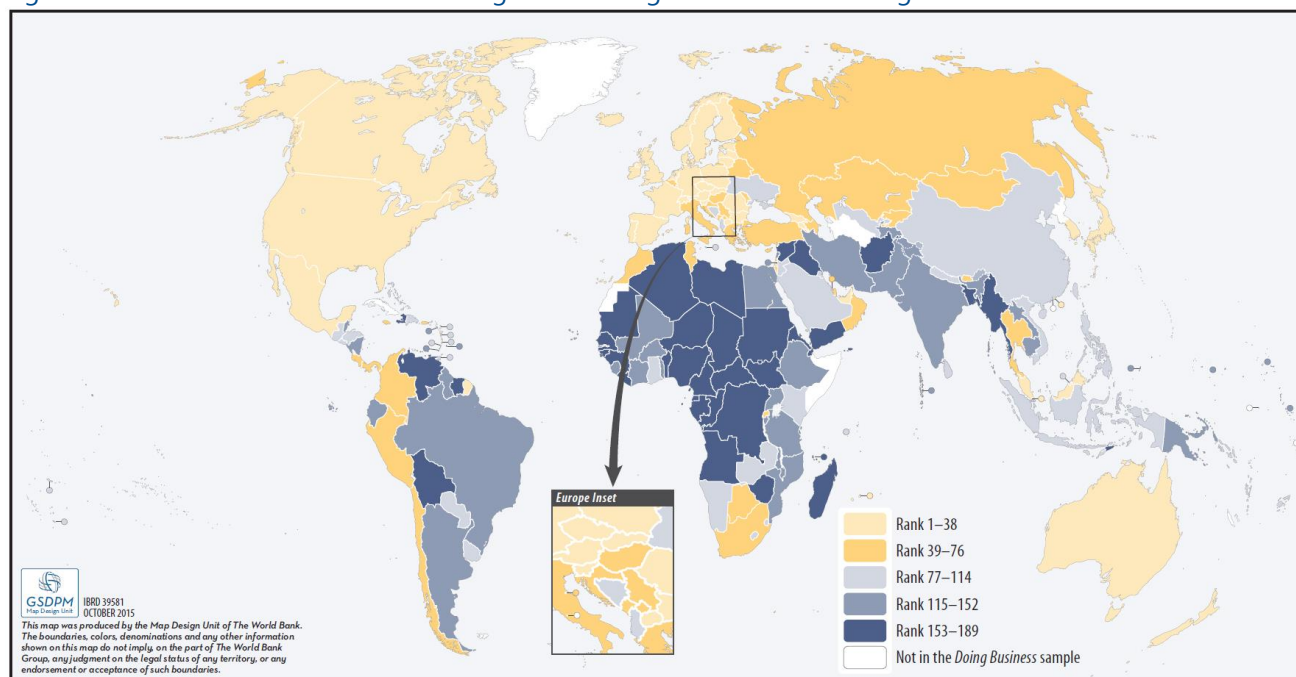

For policy makers trying to improve their economy's regulatory environment for business, a good place to start is to find out how it compares with the regulatory environment in other economies. Doing Business provides an aggregate ranking on the ease of doing business based on indicator sets that measure and benchmark regulations applying to domestic small to medium-size businesses through their life cycle. Economies are ranked from 1 to 189 by the ease of doing business ranking. Doing Business presents results for 2 aggregate measures: the distance to frontier score and the ease of doing business ranking. The ranking of economies is determined by sorting the aggregate distance to frontier scores, rounded to two decimals. An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. (See the chapter on the distance to frontier and ease of doing business).

The 10 topics included in the ranking in *Doing Business* 2016: starting a business, dealing with construction

permits, getting electricity, registering property, getting credit, protecting minority investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency. The labor market regulation indicators are not included in this year's aggregate ease of doing business ranking, but the data are presented in the economy profile.

The ease of doing business ranking compares economies with one another; the distance to frontier score benchmarks economies with respect to regulatory best practice, showing the absolute distance to the best performance on each Doing Business indicator. When compared across years, the distance to frontier score shows how much the regulatory environment for local entrepreneurs in an economy has changed over time in absolute terms, while the ease of doing business ranking can show only how much the regulatory environment has changed relative to that in other economies.

Figure 1.1 Where economies stand in the global ranking on the ease of doing business

Source: *Doing Business* database.

THE BUSINESS ENVIRONMENT

For policy makers, knowing where their economy stands in the aggregate ranking on the ease of doing business is useful. Also useful is to know how it ranks compared with other economies in the region and compared with the regional average (figure 1.2). Another perspective is provided by the regional average rankings on the topics included in the ease of doing business ranking (figure 1.3) and the distance to frontier scores (figures 1.4 and 1.5).

Figure 1.2 How economies in Southern African Development Community (SADC) rank on the ease of doing business

Note: The rankings are benchmarked to June 2015 and based on the average of each economy's distance to frontier (DTF) scores for the 10 topics included in this year's aggregate ranking. The distance to frontier score benchmarks economies with respect to regulatory practice, showing the absolute distance to the best performance in each *Doing Business* indicator. An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. For the economies for which the data cover 2 cities, scores are a population-weighted average for the 2 cities.

Figure 1.4 Distance to frontier scores on *Doing Business* topics - Southern African Development Community (SADC)

(Scale: Score 0 center, Score 100 outer edge)

Note: The rankings are benchmarked to June 2015 and based on the average of each economy's distance to frontier (DTF) scores for the 10 topics included in this year's aggregate ranking. The distance to frontier score benchmarks economies with respect to regulatory practice, showing the absolute distance to the best performance in each *Doing Business* indicator. An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. For the economies for which the data cover 2 cities, scores are a population-weighted average for the 2 cities.

Source: *Doing Business* database.

Figure 1.5 How far has Southern African Development Community (SADC) come in the areas measured by *Doing Business*?

Source: *Doing Business* database.

Note: The distance to frontier score shows how far on average an economy is from the best performance achieved by any economy on each *Doing Business* indicator. Starting a business is comparable to 2010. Getting credit, protecting minority investors, paying taxes and resolving insolvency had methodology changes in 2014 and thus are only comparable to 2013. Dealing with construction permits, registering property, trading across borders, enforcing contracts and getting electricity had methodology changes in 2015 and thus are only comparable to 2014. The measure is normalized to range between 0 and 100, with 100 representing the best performance (the frontier). See the data notes starting on page 119 of the *Doing Business 2016* report for more details on the distance to frontier score.

THE BUSINESS ENVIRONMENT

Just as the overall ranking on the ease of doing business tells only part of the story, so do changes in that ranking. Yearly movements in rankings can provide some indication of changes in an economy's regulatory environment for firms, but they are always relative. An economy's ranking might change because of developments in other economies. An economy that implemented business regulation reforms may fail to rise in the rankings (or may even drop) if it is passed by others whose business regulation reforms had a more significant impact as measured by *Doing Business*.

The absolute values of the indicators tell another part of the story (table 1.1). Policy makers can learn much by comparing the indicators for their economy with those for the lowest- and highest-scoring economies in the region as well as those for the best performers globally. These comparisons may reveal unexpected strengths in an area of business regulation—such as a regulatory process that can be completed with a small number of procedures in a few days and at a low cost.

Table 1.1 Summary of *Doing Business* indicators for Southern African Development Community (SADC)

Indicator	Lowest regional performance	Best regional performance	Regional average	Best global performance
Starting a Business (rank)	182 (Zimbabwe)	37 (Mauritius)	126	1 (New Zealand)
Starting a Business (DTF Score)	51.75 (Zimbabwe)	92.49 (Mauritius)	77.58	99.96 (New Zealand)
Procedures (number)	12.0 (Swaziland)	5.0 (Mauritius)	8.2	1.0 (New Zealand*)
Time (days)	90.0 (Zimbabwe)	6.0 (Mauritius)	33.2	0.5 (New Zealand)
Cost (% of income per capita)	112.0 (Zimbabwe)	0.3 (South Africa)	28.0	0.0 (Slovenia)
Paid-in min. capital (% of income per capita)	18.9 (Angola)	0.0 (12 Economies*)	2.0	0.0 (105 Economies*)
Dealing with Construction Permits (rank)	184 (Zimbabwe)	31 (Mozambique)	107	1 (Singapore)
Dealing with Construction Permits (DTF Score)	31.67 (Zimbabwe)	77.58 (Mozambique)	62.96	92.97 (Singapore)
Procedures (number)	19.0 (South Africa*)	10.0 (6 Economies*)	13.3	7.0 (5 Economies*)
Time (days)	448.0 (Zimbabwe)	96.0 (Swaziland)	175.5	26.0 (Singapore)
Cost (% of warehouse value)	30.8 (Madagascar)	0.3 (Botswana)	6.3	0.0 (Qatar)
Building quality control index (0-15)	4.0 (Madagascar)	13.0 (Mauritius)	8.0	15.0 (New Zealand)
Getting Electricity (rank)	188 (Madagascar)	41 (Mauritius)	139	1 (Korea, Rep.)

Indicator	Lowest regional performance	Best regional performance	Regional average	Best global performance
Getting Electricity (DTF Score)	18.27 (Madagascar)	81.93 (Mauritius)	50.51	99.88 (Korea, Rep.)
Procedures (number)	7.0 (Angola*)	4.0 (Mauritius*)	5.7	3.0 (14 Economies*)
Time (days)	450.0 (Madagascar)	37.0 (Namibia)	134.0	18.0 (Korea, Rep.*)
Cost (% of income per capita)	15,247.4 (Congo, Dem. Rep.)	260.0 (Mauritius)	2,552.0	0.0 (Japan)
Reliability of supply and transparency of tariff index (0-8)	0.0 (9 Economies*)	6.0 (Mauritius)	1.3	8.0 (18 Economies*)
Registering Property (rank)	174 (Namibia)	67 (Seychelles)	120	1 (New Zealand)
Registering Property (DTF Score)	38.61 (Namibia)	68.67 (Seychelles)	54.84	94.46 (New Zealand)
Procedures (number)	9.0 (Swaziland)	4.0 (4 Economies*)	6.0	1.0 (4 Economies*)
Time (days)	190.0 (Angola)	12.0 (Botswana)	52.6	1.0 (3 Economies*)
Cost (% of property value)	13.7 (Namibia)	1.8 (Malawi)	7.5	0.0 (Saudi Arabia)
Quality of the land administration index (0-30)	7.0 (Angola)	18.5 (Seychelles)	10.7	28.5 (3 Economies*)
Getting Credit (rank)	181 (Angola)	19 (Zambia)	106	1 (New Zealand)
Getting Credit (DTF Score)	5.00 (Angola)	75.00 (Zambia)	40.67	100.00 (New Zealand)
Strength of legal rights index (0-12)	1.0 (Angola*)	7.0 (Zambia)	4.3	12.0 (3 Economies*)
Depth of credit information index (0-8)	0.0 (6 Economies*)	8.0 (Zambia)	3.8	8.0 (26 Economies*)
Credit registry coverage (% of adults)	0.3 (Congo, Dem. Rep.)	82.6 (Mauritius)	9.5	100.0 (Portugal)
Credit bureau coverage (% of adults)	1.0 (Lesotho)	62.8 (Namibia)	17.9	100.0 (22 Economies*)
Protecting Minority Investors (rank)	174 (Congo, Dem. Rep.)	14 (South Africa)	92	1 (3 Economies*)
Protecting Minority Investors (DTF Score)	33.33 (Congo, Dem. Rep.)	71.67 (South Africa)	52.33	83.33 (3 Economies*)
Strength of minority investor protection index (0-10)	3.3 (Congo, Dem. Rep.)	7.2 (South Africa)	5.2	8.3 (3 Economies*)

Indicator	Lowest regional performance	Best regional performance	Regional average	Best global performance
Extent of conflict of interest regulation index (0-10)	3.0 (Congo, Dem. Rep.)	8.0 (South Africa)	5.7	9.3 (Singapore*)
Extent of shareholder governance index (0-10)	3.7 (3 Economies*)	6.3 (South Africa)	4.8	8.0 (4 Economies*)
Paying Taxes (rank)	173 (Congo, Dem. Rep.)	13 (Mauritius)	92	1 (United Arab Emirates*)
Paying Taxes (DTF Score)	43.50 (Congo, Dem. Rep.)	91.92 (Mauritius)	72.23	99.44 (United Arab Emirates*)
Payments (number per year)	52.0 (Congo, Dem. Rep.)	7.0 (South Africa)	31.4	3.0 (Hong Kong SAR, China*)
Time (hours per year)	346.0 (Congo, Dem. Rep.)	85.0 (Seychelles)	207.0	55.0 (Luxembourg)
Total tax rate (% of profit)	54.6 (Congo, Dem. Rep.)	13.6 (Lesotho)	32.2	25.9 (Ireland)
Trading Across Borders (rank)	187 (Congo, Dem. Rep.)	30 (Swaziland)	113	1 (16 Economies*)
Trading Across Borders (DTF Score)	1.26 (Congo, Dem. Rep.)	92.68 (Swaziland)	58.36	100.00 (16 Economies*)
Time to export: Border compliance (hours)	515 (Congo, Dem. Rep.)	3 (Swaziland)	111	0 (15 Economies*)
Cost to export: Border compliance (USD)	1,323 (Congo, Dem. Rep.)	134 (Swaziland)	531	0 (18 Economies*)
Time to export: Documentary compliance (hours)	698 (Congo, Dem. Rep.)	3 (Lesotho)	113	0 (Jordan)
Cost to export: Documentary compliance (USD)	2,500 (Congo, Dem. Rep.)	76 (Swaziland)	359	0 (20 Economies*)
Time to import: Border compliance (hours)	588 (Congo, Dem. Rep.)	4 (Botswana*)	131	0 (19 Economies*)
Cost to import: Border compliance (USD)	2,089 (Congo, Dem. Rep.)	98 (Botswana)	525	0 (28 Economies*)
Time to import: Documentary compliance (hours)	240 (Tanzania)	3 (3 Economies*)	73	1 (21 Economies*)
Cost to import: Documentary	875 (Congo, Dem. Rep.)	63 (Namibia)	228	0 (30 Economies*)

Indicator	Lowest regional performance	Best regional performance	Regional average	Best global performance
compliance (USD)				
Enforcing Contracts (rank)	185 (Angola)	27 (Mauritius)	132	1 (Singapore)
Enforcing Contracts (DTF Score)	26.26 (Angola)	70.50 (Mauritius)	46.98	84.91 (Singapore)
Time (days)	1,296.0 (Angola)	410.0 (Zimbabwe)	692.3	150.0 (Singapore)
Cost (% of claim)	119.0 (Mozambique)	14.3 (Tanzania)	48.0	9.0 (Iceland)
Quality of judicial processes index (0-18)	4.5 (Angola)	13.0 (Mauritius)	7.1	15.5 (3 Economies*)
Resolving Insolvency (rank)	189 (Congo, Dem. Rep.*)	41 (South Africa)	107	1 (Finland)
Resolving Insolvency (DTF Score)	0.00 (Congo, Dem. Rep.*)	64.29 (South Africa)	38.00	93.81 (Finland)
Recovery rate (cents on the dollar)	11.4 (Madagascar)	67.4 (Mauritius)	29.4	92.9 (Japan)
Time (years)	3.3 (Zimbabwe)	1.5 (Mozambique)	2.3	0.4 (Ireland)

Strength of insolvency framework index (0-16)	4.0 (Malawi)	14.5 (South Africa)	7.1	15.0 (4 Economies*)

* Two or more economies share the top ranking on this indicator. A number shown in place of an economy's name indicates the number of economies that share the top ranking on the indicator. For a list of these economies, see the *Doing Business* website (<http://www.doingbusiness.org>).

Note: The global best performer on time for paying taxes is defined as the lowest time recorded among all economies in the DB2016 sample that levy the 3 major taxes: profit tax, labor taxes and mandatory contributions, and VAT or sales tax.

Source: *Doing Business* database.

STARTING A BUSINESS

Formal registration of companies has many immediate benefits for the companies and for business owners and employees. Legal entities can outlive their founders. Resources are pooled as several shareholders join forces to start a company. Formally registered companies have access to services and institutions from courts to banks as well as to new markets. And their employees can benefit from protections provided by the law. An additional benefit comes with limited liability companies. These limit the financial liability of company owners to their investments, so personal assets of the owners are not put at risk. Where governments make registration easy, more entrepreneurs start businesses in the formal sector, creating more good jobs and generating more revenue for the government.

What do the indicators cover?

Doing Business measures the ease of starting a business in an economy by recording all procedures officially required or commonly done in practice by an entrepreneur to start up and formally operate an industrial or commercial business—as well as the time and cost required to complete these procedures. It also records the paid-in minimum capital that companies must deposit before registration (or within 3 months). The ranking of economies on the ease of starting a business is determined by sorting their distance to frontier scores for starting a business. These scores are the simple average of the distance to frontier scores for each of the component indicators.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the procedures. It assumes that all information is readily available to the entrepreneur and that there has been no prior contact with officials. It also assumes that the entrepreneur will pay no bribes. And it assumes that the business:

- Is a limited liability company, located in the largest business city¹, is 100% domestically owned with between 10 and 50 employees.

WHAT THE STARTING A BUSINESS

INDICATORS MEASURE

Procedures to legally start and operate a company (number)

Preregistration (for example, name verification or reservation, notarization)

Registration in the economy's largest business city¹

Postregistration (for example, social security registration, company seal)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day (2 procedures cannot start on the same day).

Procedures that can be fully completed online are recorded as ½ day.

Procedure completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

No professional fees unless services required by law

Paid-in minimum capital (% of income per capita)

Deposited in a bank or with a notary before registration (or within 3 months)

- Conducts general commercial or industrial activities.
- Has a start-up capital of 10 times income per capita.
- Has a turnover of at least 100 times income per capita.
- Does not qualify for any special benefits.
- Does not own real estate.

¹ For the 11 economies with a population of more than 100 million, data for a second city have been added.

STARTING A BUSINESS

Where do the region's economies stand today?

How easy is it for entrepreneurs in economies in Southern African Development Community (SADC) to start a business? The global rankings of these economies

on the ease of starting a business suggest an answer (figure 2.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 2.1 How economies in Southern African Development Community (SADC) rank on the ease of starting a business

Source: Doing Business database.

STARTING A BUSINESS

The indicators underlying the rankings may be more revealing. Data collected by *Doing Business* show what it takes to start a business in each economy in the region: the number of procedures, the time, the cost

and the paid-in minimum capital requirement (figure 2.2). Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 2.2 What it takes to start a business in economies in Southern African Development Community (SADC)

STARTING A BUSINESS

What are the changes over time?

Economies around the world have taken steps making it easier to start a business—streamlining procedures by setting up a one-stop shop, making procedures simpler or faster by introducing technology, and reducing or eliminating minimum capital requirements. Many have undertaken business registration reforms in stages—and often as part of a larger regulatory reform program. Among the benefits have been greater firm satisfaction

and savings and more registered businesses, financial resources and job opportunities.

What business registration reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 2.1)?

Table 2.1 How have economies in Southern African Development Community (SADC) made starting a business easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	Angola	Angola made starting a business easier by improving registration procedures and reducing the fees to register a company.
DB2016	Madagascar	Madagascar made starting a business more difficult by requiring a bank-certified check to pay the tax authority.
DB2016	Congo, Dem. Rep.	The Democratic Republic of Congo made starting a business easier by simplifying registration procedures and reducing the minimum capital requirement.
DB2016	Zambia	Zambia made starting a business more difficult by increasing the registration fees.
DB2015	Mauritius	Mauritius made starting a business easier by reducing trade license fees.
DB2015	Malawi	Malawi made starting a business easier by streamlining company name search and registration and by eliminating the requirement for inspection of company premises before issuance of a business license.
DB2015	Swaziland	Swaziland made starting a business easier by shortening the notice and objection period for obtaining a new trade license.
DB2015	Congo, Dem. Rep.	The Democratic Republic of Congo made starting a business easier by creating a one-stop shop.
DB2014	Madagascar	Madagascar made starting a business more difficult by increasing the cost to register with the National Center for Statistics.
DB2014	Swaziland	Swaziland made starting a business easier by shortening the administrative processing times for registering a new

DB year	Economy	Reform
		business and obtaining a trading license.
DB2014	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made starting a business more complicated by increasing the minimum capital requirement. At the same time, it made the process easier by reducing the time and by eliminating the requirement to obtain a certificate confirming the location of the new company's headquarters.
DB2014	<i>Zambia</i>	Zambia made starting a business easier by raising the threshold at which value added tax registration is required.
DB2013	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made starting a business easier by appointing additional public notaries.
DB2013	<i>Lesotho</i>	Lesotho made starting a business easier by creating a one-stop shop for company incorporation and by eliminating the requirements for paid-in minimum capital and for notarization of the articles of association.
DB2013	<i>Madagascar</i>	Madagascar made starting a business easier by allowing the one-stop shop to deal with the publication of the notice of incorporation.
DB2013	<i>Tanzania</i>	Tanzania made starting a business easier by eliminating the requirement for inspections by health, town and land officers as a prerequisite for a business license.
DB2012	<i>South Africa</i>	South Africa made starting a business easier by implementing its new company law, which eliminated the requirement to reserve a company name and simplified the incorporation documents.
DB2012	<i>Madagascar</i>	Madagascar eased the process of starting a business by eliminating the minimum capital requirement, but also made it more difficult by introducing the requirement of obtaining a tax identification number.
DB2012	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made business start-up faster by reducing the time required to complete company registration and obtain a national identification number.
DB2011	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo eased business start-up by eliminating procedures, including the company seal.
DB2011	<i>Mozambique</i>	Mozambique eased business start-up by introducing a simplified licensing process.
DB2011	<i>Zambia</i>	Zambia eased business start-up by eliminating the minimum capital requirement.
DB2011	<i>Zimbabwe</i>	Zimbabwe eased business start-up by reducing registration fees and speeding up the name search process and company and tax registration.
DB2010	<i>Mozambique</i>	Mozambique made starting a business easier by eliminating the minimum capital and bank deposit requirements.

DB year	Economy	Reform
DB2010	<i>Madagascar</i>	Madagascar made starting a business easier by streamlining procedures at the one-stop shop and eliminating the stamp duty and the minimum capital requirement.
DB2010	<i>Botswana</i>	Botswana made starting a business easier by simplifying the process to obtain a business license and the process to register for taxes.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

DEALING WITH CONSTRUCTION PERMITS

Regulation of construction is critical to protect the public. But it needs to be efficient, to avoid excessive constraints on a sector that plays an important part in every economy. Where complying with building regulations is excessively costly in time and money, many builders opt out. They may pay bribes to pass inspections or simply build illegally, leading to hazardous construction that puts public safety at risk. Where compliance is simple, straightforward and inexpensive, everyone is better off.

What do the indicators cover?

Doing Business records all procedures required for a business in the construction industry to build a warehouse along with the time and cost to complete each procedure. In addition, this year Doing Business introduces a new measure, the building quality control index, evaluating the quality of building regulations, the strength of quality control and safety mechanisms, liability and insurance regimes, and professional certification requirements.

The ranking of economies on the ease of dealing with construction permits is determined by sorting their distance to frontier scores for dealing with construction permits. These scores are the simple average of the distance to frontier scores for each of the component indicators.

To make the data comparable across economies, several assumptions about the construction company, the warehouse project and the utility connections are used.

Assumptions about the construction company

The construction company (BuildCo):

- Is a limited liability company (or its legal equivalent).
- Operates in the economy's largest business city. For 11 economies the data are also collected for the second largest business city.
- Is 100% domestically and privately owned with five owners, none of whom is a legal entity.
- Is fully licensed and insured to carry out construction projects, such as building warehouses.

WHAT THE DEALING WITH CONSTRUCTION PERMITS INDICATORS MEASURE

Procedures to legally build a warehouse (number)

Submitting all relevant documents and obtaining all necessary clearances, licenses, permits and certificates

Submitting all required notifications and receiving all necessary inspections

Obtaining utility connections for water and sewerage

Registering and selling the warehouse after its completion

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day. Procedures that can be fully completed online are recorded as ½ day

Procedure considered completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of warehouse value)

Official costs only, no bribes

Building quality control index (0-15)

Sum of the scores of six component indices:

Quality of building regulations (0-2)

Quality control before construction (0-1)

Quality control during construction (0-3)

Quality control after construction (0-3)

Liability and insurance regimes (0-2)

Professional certifications (0-4)

The construction company (BuildCo) (*continued*):

- Has 60 builders and other employees, all of them nationals with the technical expertise and professional experience necessary to obtain construction permits and approvals.
- Has at least one employee who is a licensed architect or engineer and registered with the local association of architects or engineers. BuildCo is not assumed to have any other employees who are technical or licensed experts, such as geological or topographical experts.
- Has paid all taxes and taken out all necessary insurance applicable to its general business activity (for example, accidental insurance for construction workers and third-person liability).
- Owns the land on which the warehouse will be built and will sell the warehouse upon its completion.
- Is valued at 50 times income per capita.
- Will be a new construction (there was no previous construction on the land), with no trees, natural water sources, natural reserves or historical monuments of any kind on the plot.
- Will have complete architectural and technical plans prepared by a licensed architect. If preparation of the plans requires such steps as obtaining further documentation or getting prior approvals from external agencies, these are counted as procedures.
- Will include all technical equipment required to be fully operational.
- Will take 30 weeks to construct (excluding all delays due to administrative and regulatory requirements).

Assumptions about the utility connections

The water and sewerage connections:

- Will be 150 meters (492 feet) from the existing water source and sewer tap. If there is no water delivery infrastructure in the economy, a borehole will be dug. If there is no sewerage infrastructure, a septic tank in the smallest size available will be installed or built.
 - Will not require water for fire protection reasons; a fire extinguishing system (dry system) will be used instead. If a wet fire protection system is required by law, it is assumed that the water demand specified below also covers the water needed for fire protection.
 - Will have an average water use of 662 liters (175 gallons) a day and an average wastewater flow of 568 liters (150 gallons) a day. Will have a peak water use of 1,325 liters (350 gallons) a day and a peak wastewater flow of 1,136 liters (300 gallons) a day.
 - Will have a constant level of water demand and wastewater flow throughout the year.
 - Will be 1 inch in diameter for the water connection and 4 inches in diameter for the sewerage connection.
- The warehouse:
 - Will be used for general storage activities, such as storage of books or stationery. The warehouse will not be used for any goods requiring special conditions, such as food, chemicals or pharmaceuticals.
 - Will have two stories, both above ground, with a total constructed area of approximately 1,300.6 square meters (14,000 square feet). Each floor will be 3 meters (9 feet, 10 inches) high.
 - Will have road access and be located in the periurban area of the economy's largest business city (that is, on the fringes of the city but still within its official limits). For 11 economies the data are also collected for the second largest business city.
 - Will not be located in a special economic or industrial zone. Will be located on a land plot of approximately 929 square meters (10,000 square feet) that is 100% owned by BuildCo and is accurately registered in the cadastre and land registry.

DEALING WITH CONSTRUCTION PERMITS

Where do the region’s economies stand today?

How easy it is for entrepreneurs in economies in Southern African Development Community (SADC) to legally build a warehouse? The global rankings of these economies on the ease of dealing with construction

permits suggest an answer (figure 3.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 3.1 How economies in Southern African Development Community (SADC) rank on the ease of dealing with construction permits

Source: Doing Business database.

DEALING WITH CONSTRUCTION PERMITS

The indicators underlying the rankings may be more revealing. Data collected by *Doing Business* show what it takes to comply with formalities to build a warehouse in each economy in the region: the number of procedures,

the time and the cost (figure 3.2). Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 3.2 What it takes to comply with formalities to build a warehouse in economies in Southern African Development Community (SADC)

Procedures (number)

DEALING WITH CONSTRUCTION PERMITS

Time (days)

DEALING WITH CONSTRUCTION PERMITS

Cost (% of warehouse value)

* Indicates a “no practice” mark. If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a “no practice” mark. Similarly, an economy receives a “no practice” or “not possible” mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a “no practice” mark puts the economy at the bottom of the ranking on the relevant indicator.

Source: *Doing Business* database.

DEALING WITH CONSTRUCTION PERMITS

Building Quality Control Index (0-15)

* Indicates a “no practice” mark. If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a “no practice” mark. Similarly, an economy receives a “no practice” or “not possible” mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a “no practice” mark puts the economy at the bottom of the ranking on the relevant indicator.

Note: The index ranges from 0 to 15, with higher values indicating better quality control and safety mechanisms in the construction permitting system. The indicator is based on the same case study assumptions as the measures of efficiency.

Source: *Doing Business* database.

DEALING WITH CONSTRUCTION PERMITS

What are the changes over time?

Smart regulation ensures that standards are met while making compliance easy and accessible to all. Coherent and transparent rules, efficient processes and adequate allocation of resources are especially important in sectors where safety is at stake. Construction is one of them. In an effort to ensure building safety while keeping

compliance costs reasonable, governments around the world have worked on consolidating permitting requirements. What construction permitting reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 3.1)?

Table 3.1 How have economies in Southern African Development Community (SADC) made dealing with construction permits easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Mauritius</i>	In Mauritius the time required for dealing with construction permits was reduced by the hiring of a more efficient subcontractor to establish sewerage connections.
DB2016	<i>Namibia</i>	In Namibia the process of dealing with construction permits became more time-consuming as a result of inefficiency at the municipality.
DB2016	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made dealing with construction permits less expensive by halving the cost to obtain a building permit.
DB2015	<i>Madagascar</i>	Madagascar made dealing with construction permits easier by reducing the time needed to obtain a building permit.
DB2015	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made dealing with construction permits more costly by increasing the building permit fee.
DB2014	<i>Botswana</i>	Botswana made dealing with construction permits easier by eliminating the requirement for an environmental impact assessment for low-risk projects.
DB2014	<i>Mozambique</i>	Mozambique made dealing with construction permits easier by improving internal processes at the Department of Construction and Urbanization—though it also increased the fees for building permits and occupancy permits.
DB2013	<i>Malawi</i>	Malawi made dealing with construction permits more expensive by increasing the cost to obtain the plan approval and to register the property.

DB year	Economy	Reform
DB2013	<i>Tanzania</i>	Tanzania made dealing with construction permits more expensive by increasing the cost to obtain a building permit.
DB2012	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo reduced the administrative costs of obtaining a construction permit.
DB2011	<i>Congo, Dem. Rep.</i>	Dealing with construction permits became easier in the Democratic Republic of Congo thanks to a reduction in the cost of a building permit from 1% of the estimated construction cost to 0.6% and a time limit for issuing building permits.
DB2010	<i>Tanzania</i>	Tanzania made dealing with construction permits more difficult by introducing changes that resulted in additional procedures and cost.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

GETTING ELECTRICITY

Access to reliable and affordable electricity is vital for businesses. To counter weak electricity supply, many firms in developing economies have to rely on self-supply, often at a prohibitively high cost. Whether electricity is reliably available or not, the first step for a customer is always to gain access by obtaining a connection.

What do the indicators cover?

Doing Business records all procedures required for a local business to obtain a permanent electricity connection and supply for a standardized warehouse, as well as the time and cost to complete them. These procedures include applications and contracts with electricity utilities, clearances from other agencies and the external and final connection works. In addition, this year Doing Business adds two new measures: the reliability of supply and transparency of tariffs index (included in the aggregate distance to frontier score and ranking on the ease of doing business) and the price of electricity (omitted from these aggregate measures). The ranking of economies on the ease of getting electricity is determined by sorting their distance to frontier scores for getting electricity. These scores are the simple average of the distance to frontier scores for each of the component indicators. To make the data comparable across economies, several assumptions are used.

Assumptions about the warehouse

The warehouse:

- Is owned by a local entrepreneur.
- Is located in the economy's largest business city. For 11 economies the data are also collected for the second largest business city.
- Is located in an area where similar warehouses are typically located. In this area a new electricity connection is not eligible for a special investment promotion regime (offering special subsidization or faster service, for example), and located in an area with no physical constraints. For example, the property is not near a railway.
- Is a new construction and is being connected to electricity for the first time.

WHAT THE GETTING ELECTRICITY

INDICATORS MEASURE

Procedures to obtain an electricity connection (number)

- Submitting all relevant documents and obtaining all necessary clearances and permits
- Completing all required notifications and receiving all necessary inspections
- Obtaining external installation works and possibly purchasing material for these works
- Concluding any necessary supply contract and obtaining final supply

Time required to complete each procedure (calendar days)

- Is at least 1 calendar day
- Each procedure starts on a separate day
- Does not include time spent gathering information
- Reflects the time spent in practice, with little follow-up and no prior contact with officials

Cost required to complete each procedure (% of income per capita)

- Official costs only, no bribes
- Excludes value added tax

The reliability of supply and transparency of tariffs index

- Sum of the scores of six component indices:
- Duration and frequency of outages
- Tools to monitor power outages
- Tools to restore power supply
- Regulatory monitoring of utilities' performance
- Financial deterrents aimed at limiting outages
- Transparency and accessibility of tariffs

Price of electricity (cents per kilowatt-hour)*

Price based on monthly bill for commercial warehouse in case study

**Price of electricity is not included in the calculation of distance to frontier nor ease of doing business ranking*

The warehouse (*continued*):

- Has two stories, both above ground, with a total surface area of approximately 1,300.6 square meters (14,000 square feet). The plot of land on which it is built is 929 square meters (10,000 square feet).
- Is used for storage of goods.

Assumptions about the electricity connection

The electricity connection:

- Is a permanent one.
- Is a three-phase, four-wire Y, 140-kilovolt-ampere (kVA) (subscribed capacity) connection (where the voltage is 120/208 V, the current would be 400 amperes; where it is 230/400 B, the current would be nearly 200 amperes).
- Is 150 meters long. The connection is to either the low-voltage or the medium-voltage distribution network and either overhead or underground, whichever is more common in the area where the warehouse is located.
- Requires works that involve the crossing of a 10-meter road (such as by excavation or overhead lines) but are all carried out on public land. There is no crossing of other owners' private property because the warehouse has access to a road.
- Includes only a negligible length in the customer's private domain.
- Will supply monthly electricity consumption of 26,880 kilowatt-hours (kWh).
- Does not involve work to install the internal electrical wiring. This has already been completed, up to and including the customer's service panel or switchboard and installation of the meter base.

Assumptions about the monthly consumption

- It is assumed that the warehouse operates 8 hours a day for 30 days a month, with equipment utilized at 80% of capacity on average, and that there are no electricity cuts (assumed for simplicity). The subscribed capacity of the warehouse is 140 kVA, with a power factor of 1 (1 kVA = 1 kW). The monthly energy consumption is therefore 26,880 kWh, and the hourly consumption 112 kWh (26,880 kWh/30 days/8 hours).
- If multiple electricity suppliers exist, the warehouse is served by the cheapest supplier.
- Tariffs effective in March of the current year are used for calculation of the price of electricity for the warehouse.

GETTING ELECTRICITY

Where do the region's economies stand today?

How easy is it for entrepreneurs in economies in Southern African Development Community (SADC) to connect a warehouse to electricity? The global rankings of these economies on the ease of getting electricity

suggest an answer (figure 4.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 4.1 How economies in Southern African Development Community (SADC) rank on the ease of getting electricity

Source: Doing Business database.

GETTING ELECTRICITY

The indicators underlying the rankings may be more revealing. Data collected by *Doing Business* show what it takes to get a new electricity connection in each economy in the region: the number of procedures, the

time and the cost (figure 4.2). Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 4.2 What it takes to get an electricity connection in economies in Southern African Development Community (SADC)

Procedures (number)

GETTING ELECTRICITY

Time (days)

GETTING ELECTRICITY

Cost (% of income per capita)

GETTING ELECTRICITY

Reliability of supply and transparency of tariff index (0-8)

Source: *Doing Business* database.

Note: The index ranges from 0 to 8, with higher values indicating greater reliability of electricity supply and greater transparency of tariffs.

GETTING ELECTRICITY

What are the changes over time?

Obtaining an electricity connection is essential to enable a business to conduct its most basic operations. In many economies the connection process is complicated by the multiple laws and regulations involved—covering service quality, general safety, technical standards, procurement practices and internal wiring installations. In an effort to ensure safety in the connection process while keeping

connection costs reasonable, governments around the world have worked to consolidate requirements for obtaining an electricity connection. What reforms in getting electricity has *Doing Business* recorded in Southern African Development Community (SADC) (table 4.1)?

Table 4.1 How have economies in Southern African Development Community (SADC) made getting electricity easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Botswana</i>	The utility in Botswana made getting electricity easier by enforcing service delivery timelines for new connections and improving the stock of materials for connection works.
DB2015	<i>Malawi</i>	Malawi reduced the time required to get electricity by engaging subcontractors to carry out external connection works.
DB2015	<i>Congo, Dem. Rep.</i>	In the Democratic Republic of Congo the utility in Kinshasa made getting electricity easier by reducing the number of approvals required for new connections and reducing the burden of the security deposit.
DB2013	<i>Angola</i>	Angola made getting electricity easier by eliminating the requirement for customers applying for an electricity connection to obtain authorizations from the 2 utility companies.
DB2013	<i>Namibia</i>	Namibia made getting electricity easier by reducing the time required to provide estimates and external connection works and by lowering the connection costs.
DB2012	<i>Mozambique</i>	Mozambique made getting electricity more difficult by requiring authorization of a connection project by the Ministry of Energy and by adding an inspection of the completed external works.

Source: *Doing Business* database.

REGISTERING PROPERTY

Ensuring formal property rights is fundamental. Effective administration of land is part of that. If formal property transfer is too costly or complicated, formal titles might go informal again. And where property is informal or poorly administered, it has little chance of being accepted as collateral for loans—limiting access to finance.

What do the indicators cover?

Doing Business records the full sequence of procedures necessary for a business to purchase property from another business and transfer the property title to the buyer's name. The transaction is considered complete when it is opposable to third parties and when the buyer can use the property, use it as collateral for a bank loan or resell it. In addition, this year *Doing Business* adds a new measure to the set of registering property indicators, an index of the quality of the land administration system in each economy. The ranking of economies on the ease of registering property is determined by sorting their distance to frontier scores for registering property. These scores are the simple average of the distance to frontier scores for each of the component indicators. To make the data comparable across economies, several assumptions about the parties to the transaction, the property and the procedures are used.

The parties (buyer and seller):

- Are limited liability companies, 100% domestically and privately owned and perform general commercial activities and are located in the economy's largest business city².
- Have 50 employees each, all of whom are nationals.

The property (fully owned by the seller):

- Has a value of 50 times income per capita. The sale price equals the value and entire property will be transferred.
- Is registered in the land registry or cadastre, or both, and is free of title disputes.

WHAT THE REGISTERING PROPERTY

INDICATORS MEASURE

Procedures to legally transfer title on immovable property (number)

Preregistration (for example, checking for liens, notarizing sales agreement, paying property transfer taxes)

Registration in the economy's largest business city²

Postregistration (for example, filing title with the municipality)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day. Procedures that can be fully completed online are recorded as ½ day.

Procedure considered completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of property value)

Official costs only, no bribes

No value added or capital gains taxes included

Quality of land administration index (0-30)

- Is located in a periurban commercial zone, and no rezoning is required.
- Has no mortgages attached, has been under the same ownership for the past 10 years.
- Consists of 557.4 square meters (6,000 square feet) of land and a 10-year-old, 2-story warehouse of 929 square meters (10,000 square feet). The warehouse is in good condition and complies with all safety standards, building codes and legal requirements. There is no heating system.

² For the 11 economies with a population of more than 100 million, data for a second city have been added.

REGISTERING PROPERTY

Where do the region’s economies stand today?

How easy is it for entrepreneurs in economies in Southern African Development Community (SADC) to transfer property? The global rankings of these

economies on the ease of registering property suggest an answer (figure 5.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 5.1 How economies in Southern African Development Community (SADC) rank on the ease of registering property

Source: Doing Business database.

REGISTERING PROPERTY

The indicators underlying the rankings may be more revealing. Data collected by *Doing Business* show what it takes to complete a property transfer in each economy in the region: the number of procedures, the

time and the cost (figure 5.2). Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 5.2 What it takes to register property in economies in Southern African Development Community (SADC)

Procedures (number)

REGISTERING PROPERTY

Time (days)

REGISTERING PROPERTY

Cost (% of property value)

* Indicates a “no practice” mark. If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a “no practice” mark. Similarly, an economy receives a “no practice” or “not possible” mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a “no practice” mark puts the economy at the bottom of the ranking on the relevant indicator.

Source: *Doing Business* database.

REGISTERING PROPERTY

Quality of Land Administration Index (0-30)

* Indicates a “no practice” mark. If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a “no practice” mark. Similarly, an economy receives a “no practice” or “not possible” mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a “no practice” mark puts the economy at the bottom of the ranking on the relevant indicator.

Source: *Doing Business* database.

Note: The index ranges from 0 to 30, with higher values indicating better quality of the land administration system.

REGISTERING PROPERTY

What are the changes over time?

Economies worldwide have been making it easier for entrepreneurs to register and transfer property—such as by computerizing land registries, introducing time limits for procedures and setting low fixed fees. Many have cut the time required substantially—enabling

buyers to use or mortgage their property earlier. What property registration reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 5.1)?

Table 5.1 How have economies in Southern African Development Community (SADC) made registering property easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Madagascar</i>	Madagascar made transferring property less costly by lowering the property transfer tax.
DB2015	<i>Mozambique</i>	Mozambique made registering property easier by streamlining procedures at the land registry and municipality.
DB2015	<i>Zambia</i>	Zambia made transferring property more difficult by increasing the property transfer tax rate.
DB2014	<i>Lesotho</i>	Lesotho made transferring property easier by streamlining procedures and increasing administrative efficiency.
DB2014	<i>Malawi</i>	Malawi made transferring property easier by reducing the stamp duty.
DB2014	<i>Namibia</i>	Namibia made transferring property more expensive by increasing the transfer and stamp duties.
DB2013	<i>Mauritius</i>	Mauritius made property transfers faster by implementing an electronic information management system at the Registrar-General's Department.
DB2013	<i>Namibia</i>	Namibia made transferring property more difficult by requiring conveyancers to obtain a building compliance certificate beforehand.
DB2012	<i>South Africa</i>	South Africa made transferring property less costly and more efficient by reducing the transfer duty and introducing electronic filing.

DB year	Economy	Reform
DB2012	<i>Swaziland</i>	Swaziland made transferring property quicker by streamlining the process at the land registry.
DB2012	<i>Zambia</i>	Zambia made registering property more costly by increasing the property transfer tax rate.
DB2012	<i>Namibia</i>	Namibia made transferring property more expensive for companies.
DB2012	<i>Malawi</i>	Malawi made property registration slower by no longer sustaining last year's time improvement in Compliance Certificate processing times at the Ministry of Lands.
DB2012	<i>Angola</i>	Angola made transferring property less costly by reducing transfer taxes.
DB2011	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo reduced by half the property transfer tax to 3% of the property value.
DB2011	<i>Malawi</i>	Malawi eased property transfers by cutting the wait for consents and registration of legal instruments by half.
DB2010	<i>Madagascar</i>	Madagascar made transferring property more costly by making the use of a notary mandatory for property transactions.
DB2010	<i>Botswana</i>	Botswana made registering property more difficult by adding a requirement to notify the tax agency of the value added tax payment.
DB2010	<i>Angola</i>	Angola speeded up property transfers by digitizing the land registry in Luanda and splitting it into 2 units, each responsible for half the land covered by the registry.
DB2010	<i>Mauritius</i>	Mauritius made registering property easier by setting a statutory time limit of 15 days for issuance of the final property title by the land registry.
DB2010	<i>Zimbabwe</i>	Zimbabwe made transferring property less costly by introducing a new policy on the capital gains tax that resulted in a reduction in the actual amount paid.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

GETTING CREDIT

Two types of frameworks can facilitate access to credit and improve its allocation: credit information systems and borrowers and lenders in collateral and bankruptcy laws. Credit information systems enable lenders' rights to view a potential borrower's financial history (positive or negative)—valuable information to consider when assessing risk. And they permit borrowers to establish a good credit history that will allow easier access to credit. Sound collateral laws enable businesses to use their assets, especially movable property, as security to generate capital—while strong creditors' rights have been associated with higher ratios of private sector credit to GDP.

What do the indicators cover?

Doing Business assesses the sharing of credit information and the legal rights of borrowers and lenders with respect to secured transactions through 2 sets of indicators. The depth of credit information index measures rules and practices affecting the coverage, scope and accessibility of credit information available through a credit registry or a credit bureau. The strength of legal rights index measures whether certain features that facilitate lending exist within the applicable collateral and bankruptcy laws. *Doing Business* uses two case scenarios, Case A and Case B, to determine the scope of the secured transactions system, involving a secured borrower and a secured lender and examining legal restrictions on the use of movable collateral (for more details on each case, see the Data Notes section of the *Doing Business 2016* report). These scenarios assume that the borrower:

- Is a private limited liability company.

Has its headquarters and only base of operations in the largest business city. For the 11 economies with a population of more than 100 million, data for a second city have been added.

WHAT THE GETTING CREDIT INDICATORS MEASURE

Strength of legal rights index (0–12)

Rights of borrowers and lenders through collateral laws

Protection of secured creditors' rights through bankruptcy laws

Depth of credit information index (0–8)

Scope and accessibility of credit information distributed by credit bureaus and credit registries

Credit bureau coverage (% of adults)

Number of individuals and firms listed in largest credit bureau as percentage of adult population

Credit registry coverage (% of adults)

Number of individuals and firms listed in credit registry as percentage of adult population

- Has up to 50 employees.
- Is 100% domestically owned, as is the lender.

The ranking of economies on the ease of getting credit is determined by sorting their distance to frontier scores for getting credit. These scores are the distance to frontier score for the strength of legal rights index and the depth of credit information index.

GETTING CREDIT

Where do the region’s economies stand today?

How well do the credit information systems and collateral and bankruptcy laws in economies in Southern African Development Community (SADC) facilitate access to credit? The global rankings of these economies on the

ease of getting credit suggest an answer (figure 6.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 6.1 How economies in Southern African Development Community (SADC) rank on the ease of getting credit

Source: Doing Business database.

GETTING CREDIT

Another way to assess how well regulations and institutions support lending and borrowing in the region is to see where the region stands in the distribution of scores across regions. Figure 6.2 highlights the score on

the strength of legal rights index for Southern African Development Community (SADC) and comparators on the strength of legal rights index. Figure 6.3 shows the same thing for the depth of credit information index.

Figure 6.2 How strong are legal rights for borrowers and lenders?

Region scores on strength of legal rights index

Note: Higher scores indicate that collateral and bankruptcy laws are better designed to facilitate access to credit.

Source: *Doing Business* database.

Figure 6.3 How much credit information is shared—and how widely?

Region scores on depth of credit information index

Note: Higher scores indicate the availability of more credit information, from either a credit registry or a credit bureau, to facilitate lending decisions. If the credit bureau or registry is not operational or covers less than 5% of the adult population, the total score on the depth of credit information index is 0.

Source: *Doing Business* database.

GETTING CREDIT

What are the changes over time?

When economies strengthen the legal rights of lenders and borrowers under collateral and bankruptcy laws, and increase the scope, coverage and accessibility of credit information, they can increase entrepreneurs' access to

credit. What credit reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 6.1)?

Table 6.1 How have economies in Southern African Development Community (SADC) made getting credit easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Lesotho</i>	Lesotho improved access to credit information by establishing its first credit bureau.
DB2016	<i>Madagascar</i>	Madagascar improved access to credit by broadening the range of assets that can be used as collateral (including future assets), by allowing a general description of assets granted as collateral and by allowing a general description of debts and obligations.
DB2016	<i>Namibia</i>	Namibia improved access to credit information by guaranteeing by law borrowers' right to inspect their own data.
DB2016	<i>Seychelles</i>	The Seychelles improved access to credit information by establishing a credit registry.
DB2016	<i>Zambia</i>	In Zambia the credit bureau began to provide credit scores.
DB2016	<i>Zimbabwe</i>	In Zimbabwe the credit bureau began to provide credit scores.
DB2015	<i>Tanzania</i>	Tanzania improved access to credit information by creating credit bureaus.
DB2015	<i>South Africa</i>	South Africa made access to credit information more difficult by introducing regulations requiring credit bureaus to remove negative credit information from their databases, such as adverse information on consumer behavior or enforcement action accumulated on a consumer's record before April 1, 2014.
DB2015	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo improved access to credit information by establishing a credit registry.

DB year	Economy	Reform
DB2015	<i>Zambia</i>	In Zambia, the credit bureau improved access to credit information by starting to exchange credit information with retailers and utilities.
DB2014	<i>Mauritius</i>	Mauritius improved access to credit information by expanding the scope of credit information and increasing the coverage of the historical data distributed from 2 years to 3.
DB2014	<i>Tanzania</i>	Tanzania improved its credit information system through new regulations that provide for the licensing of credit reference bureaus and outline the functions of the credit reference data bank.
DB2014	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo strengthened its secured transactions system by adopting the OHADA (Organization for the Harmonization of Business Law in Africa) Uniform Act on Secured Transactions. The new law broadens the range of assets that can be used as collateral (including future assets) and the range of obligations that can be secured, extends security interests to the proceeds of the original asset and introduces the possibility of out-of-court enforcement.
DB2013	<i>Mauritius</i>	Mauritius improved access to credit information by starting to collect payment information from retailers and beginning to distribute both positive and negative information.
DB2013	<i>Seychelles</i>	Seychelles improved access to credit information by adopting new regulations that provide for the establishment and operation of a credit registry database.
DB2012	<i>Angola</i>	Angola strengthened its credit information system by adopting new rules for credit bureaus and guaranteeing the right of borrowers to inspect their data.
DB2012	<i>Madagascar</i>	Madagascar improved its credit information system by eliminating the minimum threshold for loans included in the database and making it mandatory for banks to share credit information with the credit bureau.
DB2012	<i>Malawi</i>	Malawi improved its credit information system by passing a new law allowing the creation of a private credit bureau.
DB2010	<i>Mauritius</i>	Mauritius improved access to credit information by allowing the licensing of private credit information bureaus and by expanding the coverage of the Mauritius Credit Information Bureau to all institutions offering credit facilities.

DB year	Economy	Reform
DB2010	<i>Zambia</i>	Zambia improved its credit information system by making it mandatory for banks and nonbank financial institutions registered with the central bank to use credit reference reports and to provide data to the credit bureau.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

PROTECTING MINORITY INVESTORS

Protecting minority investors matters for the ability of companies to raise the capital they need to grow, innovate, diversify and compete. Effective regulations define related-party transactions precisely, promote clear and efficient disclosure requirements, require shareholder participation in major decisions of the company and set detailed standards of accountability for company insiders.

What do the indicators cover?

Doing Business measures the protection of minority investors from conflicts of interest through one set of indicators and shareholders' rights in corporate governance through another. The ranking of economies on the strength of minority investor protections is determined by sorting their distance to frontier scores for protecting minority investors. These scores are the simple average of the distance to frontier scores for the extent of conflict of interest regulation index and the extent of shareholder governance index. To make the data comparable across economies, a case study uses several assumptions about the business and the transaction.

The business (Buyer):

- Is a publicly traded corporation listed on the economy's most important stock exchange (or at least a large private company with multiple shareholders).
- Has a board of directors and a chief executive officer (CEO) who may legally act on behalf of Buyer where permitted, even if this is not specifically required by law.

The transaction involves the following details:

- Mr. James, a director and the majority shareholder of the company, proposes that the company purchase used trucks from another company he owns.
- The price is higher than the going price for used trucks, but the transaction goes forward.
- All required approvals are obtained, and all required disclosures made, though the transaction is prejudicial to Buyer.
- Shareholders sue the interested parties and the members of the board of directors.

WHAT THE PROTECTING MINORITY INVESTORS INDICATORS MEASURE

Extent of disclosure index (0–10)

Review and approval requirements for related-party transactions ; Disclosure requirements for related-party transactions

Extent of director liability index (0–10)

Ability of minority shareholders to sue and hold interested directors liable for prejudicial related-party transactions; Available legal remedies (damages, disgorgement of profits, fines, imprisonment, rescission of the transaction)

Ease of shareholder suits index (0–10)

Access to internal corporate documents; Evidence obtainable during trial and allocation of legal expenses

Extent of conflict of interest regulation index (0–10)

Simple average of the extent of disclosure, extent of director liability and ease of shareholder indices

Extent of shareholder rights index (0–10)

Shareholders' rights and role in major corporate decisions

Extent of ownership and control index (0–10)

Governance safeguards protecting shareholders from undue board control and entrenchment

Extent of corporate transparency index (0–10)

Corporate transparency on ownership stakes, compensation, audits and financial prospects

Extent of shareholder governance index (0–10)

Simple average of the extent of shareholders rights, extent of ownership and control and extent of corporate transparency indices

Strength of investor protection index (0–10)

Simple average of the extent of conflict of interest regulation and extent of shareholder governance indices

PROTECTING MINORITY INVESTORS

Where do the region’s economies stand today?

How strong are investor protections against self-dealing in economies in Southern African Development Community (SADC)? The global rankings of these economies on the strength of investor protection index suggest an answer (figure 7.1). While the indicator does

not measure all aspects related to the protection of minority investors, a higher ranking does indicate that an economy’s regulations offer stronger investor protections against self-dealing in the areas measured.

Figure 7.1 How economies in Southern African Development Community (SADC) rank on the strength of investor protection index

Source: Doing Business database.

PROTECTING MINORITY INVESTORS

The strength of minority investor protection index is the average of the extent of conflict of interest regulation index and the extent of shareholder governance index. The index ranges from 0 to 10, rounded to the nearest decimal place, with higher values indicating stronger minority investor protections. Figures 7.2 and 7.3

highlight the scores on the various minority investor protection indices for Southern African Development Community (SADC). Comparing the scores across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 7.2 How extensive are conflict of interest regulations?

Extent of conflict of interest regulation index (0-10)

Note: Higher values indicate stronger regulation of conflicts of interest.
 Source: Doing Business database.

Figure 7.3 How extensive is shareholder governance?

Extent of shareholder governance index (0-10)

Note: Higher scores indicate stronger rights of shareholders in corporate governance.

Source: *Doing Business* database.

PROTECTING MINORITY INVESTORS

What are the changes over time?

Economies with the strongest protections of minority investors from self-dealing require detailed disclosure and define clear duties for directors. They also have well-functioning courts and up-to-date procedural rules that give minority shareholders the means to prove their case and obtain a judgment within a reasonable time. So reforms to strengthen minority investor protections may

move ahead on different fronts—such as through new or amended company laws, securities regulations or revisions to court procedures. What minority investor protection reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 7.1)?

Table 7.1 How have economies in Southern African Development Community (SADC) strengthened minority investor protections—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Madagascar</i>	Madagascar strengthened minority investor protections by requiring that directors with a conflict of interest fully disclose the nature of their interest to the board of directors.
DB2016	<i>Zimbabwe</i>	Zimbabwe strengthened minority investor protections by introducing provisions allowing legal practitioners to enter into contingency fee agreements with clients.
DB2015	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo strengthened minority investor protections by introducing greater requirements for disclosure of related-party transactions to the board of directors and by making it possible for shareholders to inspect the documents pertaining to related-party transactions and to appoint auditors to conduct an inspection of such transactions.
DB2014	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo strengthened investor protections by adopting the OHADA Uniform Act on Commercial Companies and Economic Interest Groups, which introduces additional approval and disclosure requirements for related-party transactions and makes it possible to sue directors when such transactions harm the company.
DB2013	<i>Lesotho</i>	Lesotho strengthened investor protections by increasing the disclosure requirements for related-party transactions and improving the liability regime for company directors in cases

DB year	Economy	Reform
		of abusive related-party transactions.
DB2011	<i>Swaziland</i>	Swaziland strengthened investor protections by requiring greater corporate disclosure, higher standards of accountability for company directors and greater access to corporate information for minority investors. Swaziland reduced the time to import by implementing an electronic data interchange system for customs at its border posts.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

PAYING TAXES

Taxes are essential. The level of tax rates needs to be carefully chosen—and needless complexity in tax rules avoided. Firms in economies that rank better on the ease of paying taxes in the *Doing Business* study tend to perceive both tax rates and tax administration as less of an obstacle to business according to the World Bank Enterprise Survey research.

What do the indicators cover?

Using a case scenario, *Doing Business* records the taxes and mandatory contributions that a medium-size company must pay in a given year as well as measures of the administrative burden of paying taxes and contributions. This case scenario uses a set of financial statements and assumptions about transactions made over the year. Information is also compiled on the frequency of filing and payments as well as time taken to comply with tax laws. The ranking of economies on the ease of paying taxes is determined by sorting their distance to frontier scores on the ease of paying taxes. These scores are the simple average of the distance to frontier scores for each of the component indicators, with a threshold and a nonlinear transformation applied to one of the component indicators, the total tax rate³. The financial statement variables have been updated to be proportional to 2012 income per capita; previously they were proportional to 2005 income per capita. To make the data comparable across economies, several assumptions are used.

- TaxpayerCo is a medium-size business that started operations on January 1, 2013.
- The business starts from the same financial position in each economy. All the taxes and mandatory contributions paid during the second year of operation are recorded.

WHAT THE PAYING TAXES INDICATORS MEASURE

Tax payments for a manufacturing company in 2014 (number per year adjusted for electronic and joint filing and payment)

Total number of taxes and contributions paid, including consumption taxes (value added tax, sales tax or goods and service tax)

Method and frequency of filing and payment

Time required to comply with 3 major taxes (hours per year)

Collecting information and computing the tax payable

Completing tax return forms, filing with proper agencies

Arranging payment or withholding

Preparing separate tax accounting books, if required

Total tax rate (% of profit before all taxes)

Profit or corporate income tax

Social contributions and labor taxes paid by the employer

Property and property transfer taxes

Dividend, capital gains and financial transactions taxes

Waste collection, vehicle, road and other taxes

- Taxes and mandatory contributions are measured at all levels of government.
- Taxes and mandatory contributions include corporate income tax, turnover tax and all labor taxes and contributions paid by the company.
- A range of standard deductions and exemptions are also recorded.

³ The nonlinear distance to frontier for the total tax rate is equal to the distance to frontier for the total tax rate to the power of 0.8. The threshold is defined as the total tax rate at the 15th percentile of the overall distribution for all years included in the analysis up to and including *Doing Business 2015*, which is 26.1%. All economies with a total tax rate below this threshold receive the same score as the economy at the threshold.

PAYING TAXES

Where do the region's economies stand today?

What is the administrative burden of complying with taxes in economies in Southern African Development Community (SADC)—and how much do firms pay in taxes? The global rankings of these economies on the

ease of paying taxes offer useful information for assessing the tax compliance burden for businesses (figure 8.1). The average ranking of the region provides a useful benchmark.

Figure 8.1 How economies in Southern African Development Community (SADC) rank on the ease of paying taxes

Note: All economies with a total tax rate below the threshold of 26.1% applied in DB2015, receive the same distance to frontier score for the total tax rate (a distance to frontier score of 100 for the total tax rate) for the purpose of calculating the ranking on the ease of paying taxes.

Source: Doing Business database.

PAYING TAXES

The indicators underlying the rankings may be more revealing. Data collected by *Doing Business* show what it takes to comply with tax regulations in each economy in the region—the number of payments per year and the time required to prepare, and file and pay taxes the 3

major taxes (corporate income tax, VAT or sales tax and labor taxes and mandatory contributions)—as well as the total tax rate (figure 8.2). Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 8.2 How easy is it to pay taxes in economies in Southern African Development Community (SADC)—and what are the total tax rates?

Payments (number per year)

PAYING TAXES

Time (hours per year)

PAYING TAXES

Total tax rate (% of profit)

Source: Doing Business database.

PAYING TAXES

What are the changes over time?

Economies around the world have made paying taxes faster and easier for businesses—such as by consolidating filings, reducing the frequency of payments or offering electronic filing and payment. Many have lowered tax rates. Changes have brought

concrete results. Some economies simplifying compliance with tax obligations and reducing rates have seen tax revenue rise. What tax reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 8.1)?

Table 8.1 How have economies in Southern African Development Community (SADC) made paying taxes easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Angola</i>	Angola made paying taxes less costly for companies by reducing the corporate income tax rate.
DB2016	<i>Mozambique</i>	Mozambique made paying taxes easier and less costly for companies by implementing an online system for filing social security contributions and by increasing the depreciation rate for copying machines.
DB2016	<i>Swaziland</i>	Swaziland made paying taxes less costly for companies by reducing the corporate income tax rate. On the other hand, Swaziland raised the ceiling for the National Provident Fund contribution.
DB2016	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made paying taxes more complicated for companies by introducing a new social security contribution paid by employers, though it subsequently reduced the rate of the contribution.
DB2016	<i>Zambia</i>	Zambia made paying taxes easier for companies by implementing electronic filing and payment for VAT. At the same time, Zambia made paying taxes more costly by increasing the property transfer tax rate.
DB2015	<i>Namibia</i>	Namibia made paying taxes more complicated for companies by introducing a new vocational education and training levy.
DB2015	<i>Swaziland</i>	Swaziland made paying taxes less costly for companies by reducing the corporate income tax rate.

DB year	Economy	Reform
DB2015	<i>Seychelles</i>	The Seychelles made paying taxes easier for companies by reducing the business tax rate applicable to income above 1 million Seychelles rupees (\$77,700) and by introducing a simplified new tax return allowing joint filing and payment of the business tax, VAT and corporate social responsibility tax. On the other hand, it increased employers' pension fund contribution rate.
DB2015	<i>Tanzania</i>	Tanzania made paying taxes more complicated for companies by introducing an excise tax on money transfers. On the other hand, it made paying taxes less costly by reducing the rate of the skill and development levy.
DB2015	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made paying taxes easier for companies by simplifying corporate income tax returns and abolishing the minimum tax payable depending on a company's size. On the other hand, it increased the rate for the minimum lump-sum tax applied to annual revenue.
DB2015	<i>Zambia</i>	Zambia made paying taxes easier for companies by abolishing the medical levy and by introducing an online system for filing corporate income tax, VAT and some labor taxes. At the same time, it also increased the property transfer tax.
DB2014	<i>Madagascar</i>	Madagascar made paying taxes easier and less costly for companies by training taxpayers in the use of the online system for value added tax declarations and by reducing the corporate income tax rate.
DB2014	<i>Seychelles</i>	The Seychelles made paying taxes more complicated for companies by introducing a value added tax.
DB2014	<i>South Africa</i>	South Africa made paying taxes easier for companies by replacing the secondary tax on companies with a dividend tax borne by shareholders.
DB2014	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made paying taxes more costly for companies by increasing the employers' social security contribution rate.
DB2013	<i>Botswana</i>	Botswana made paying taxes more costly for companies by increasing the profit tax rate.

DB year	Economy	Reform
DB2013	<i>Malawi</i>	Malawi introduced a mandatory pension contribution for companies.
DB2013	<i>Swaziland</i>	Swaziland introduced value added tax.
DB2012	<i>Seychelles</i>	The Seychelles made paying taxes less costly for firms by eliminating the social security tax.
DB2012	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made paying taxes easier for firms by replacing the sales tax with a value added tax.
DB2011	<i>Madagascar</i>	Madagascar continued to reduce corporate tax rates.
DB2011	<i>Mauritius</i>	Mauritius introduced a new corporate social responsibility tax.
DB2011	<i>Seychelles</i>	The Seychelles removed the tax-free threshold limit and lowered corporate income tax rates.
DB2011	<i>Zimbabwe</i>	Zimbabwe reduced the corporate income tax rate from 30% to 25%, lowered the capital gains tax from 20% to 5% and simplified the payment of corporate income tax by allowing quarterly payment through commercial banks.
DB2010	<i>South Africa</i>	South Africa made paying taxes less costly for companies by abolishing the stamp duty.
DB2010	<i>Malawi</i>	Malawi made paying taxes less time consuming for companies by encouraging the use of electronic systems.
DB2010	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made paying taxes more costly for companies by raising the sales tax rate.
DB2010	<i>Angola</i>	Angola made paying taxes easier for companies by introducing mandatory electronic filing for social security contributions for those with more than 20 employees.

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

TRADING ACROSS BORDERS

In today's globalized world, making trade between economies easier is increasingly important for business. Excessive document requirements, burdensome customs procedures, inefficient port operations and inadequate infrastructure all lead to extra costs and delays for exporters and importers, stifling trade potential.

What do the indicators cover?

Doing Business records the time and cost associated with the logistical process of exporting and importing goods. Under the new methodology introduced this year, *Doing Business* measures the time and cost (excluding tariffs) associated with three sets of procedures—documentary compliance, border compliance and domestic transport—within the overall process of exporting or importing a shipment of goods. The ranking of economies on the ease of trading across borders is determined by sorting their distance to frontier scores for trading across borders. These scores are the simple average of the distance to frontier scores for the time and cost for documentary compliance and border compliance to export and import.

To make the data comparable across economies, a few assumptions are made about the traded goods and the transactions:

Time

- Time is measured in hours, and 1 day is 24 hours (for example, 22 days are recorded as $22 \times 24 = 528$ hours). If customs clearance takes 7.5 hours, the data are recorded as is. Alternatively, suppose that documents are submitted to a customs agency at 8:00 a.m., are processed overnight and can be picked up at 8:00 a.m. the next day. In this case the time for customs clearance would be recorded as 24 hours because the actual procedure took 24 hours.

WHAT THE TRADING ACROSS BORDERS

INDICATORS MEASURE FOR IMPORT & EXPORT

Documentary compliance – cost (US\$) & time (hours)

Obtain, prepare and submit documents:

- During transport, clearance, inspections and port or border handling in origin economy
- Required by origin, transit and destination economies

Covers all documents by law and in practice

Border compliance – cost (US\$) & time (hours)

Customs clearance and inspections

Inspections by other agencies

Port or border handling

Obtaining, preparing and submitting documents during clearance, inspections and port or border handling

Domestic transport*

Loading and unloading of shipment

Transport between warehouse and terminal/port

Transport between terminal/port and border

Obtaining, preparing and submitting documents during domestic transport

Traffic delays and road police checks while shipment is en route

* Although *Doing Business* collects and publishes data on the time and cost for domestic transport, it does not use these data in calculating the distance to frontier score for trading across borders or the ranking on the ease of trading across borders.

Cost

- Insurance cost and informal payments for which no receipt is issued are excluded from the costs recorded. Costs are reported in U.S. dollars. Contributors are asked to convert local currency into U.S. dollars based on the exchange rate prevailing on the day they answer the questionnaire.

Assumptions of the case study

- For each of the 189 economies covered by *Doing Business*, it is assumed that a shipment travels from a warehouse in the largest business city of the exporting economy to a warehouse in the largest business city of the importing economy. For 11 economies the data are also collected, under the same case study assumptions, for the second largest business city.
- The import and export case studies assume different traded products. It is assumed that each economy imports a standardized shipment of 15 metric tons of containerized auto parts (HS 8708) from its natural import partner—the economy from which it imports the largest value (price times quantity) of auto parts. It is assumed that each economy exports the product of its comparative advantage (defined by the largest export value) to its natural export partner—the economy that is the largest purchaser of this product. Precious metal and gems, live animals and pharmaceuticals are excluded from the list of possible export products, however, and the second largest product category is considered as needed.
- To identify the trading partners and export product for each economy, *Doing Business* collected data on trade flows for the most recent four-year period from international databases such as the United Nations Commodity Trade Statistics Database (UN Comtrade). For economies for which trade flow data were not available, data from ancillary government sources (various ministries and departments) and World Bank Group country offices were used to identify the export product and natural trading partners.
- A shipment is a unit of trade. Export shipments do not necessarily need to be containerized, while import shipments of auto parts are assumed to be containerized.
- Shipping cost based on weight is assumed to be greater than shipping cost based on volume.
- If government fees are determined by the value of the shipment, the value is assumed to be \$50,000.
- The product is new, not secondhand or used merchandise.
- The exporting firm is responsible for hiring and paying for a freight forwarder or customs broker (or both) and pays for all costs related to international shipping, domestic transport, clearance and mandatory inspections by customs and other government agencies, port or border handling, documentary compliance fees and the like for exports. The importing firm is responsible for the above costs for imports.
- The mode of transport is the one most widely used for the chosen export or import product and the trading partner, as is the seaport, airport or land border crossing.
- All electronic submissions of information requested by any government agency in connection with the shipment are considered to be documents obtained, prepared and submitted during the export or import process.
- A port or border is defined as a place (seaport, airport or land border crossing) where merchandise can enter or leave an economy.
- Government agencies considered relevant are agencies such as customs, port authorities, road police, border guards, standardization agencies, ministries or departments of agriculture or industry, national security agencies and any other government authorities.

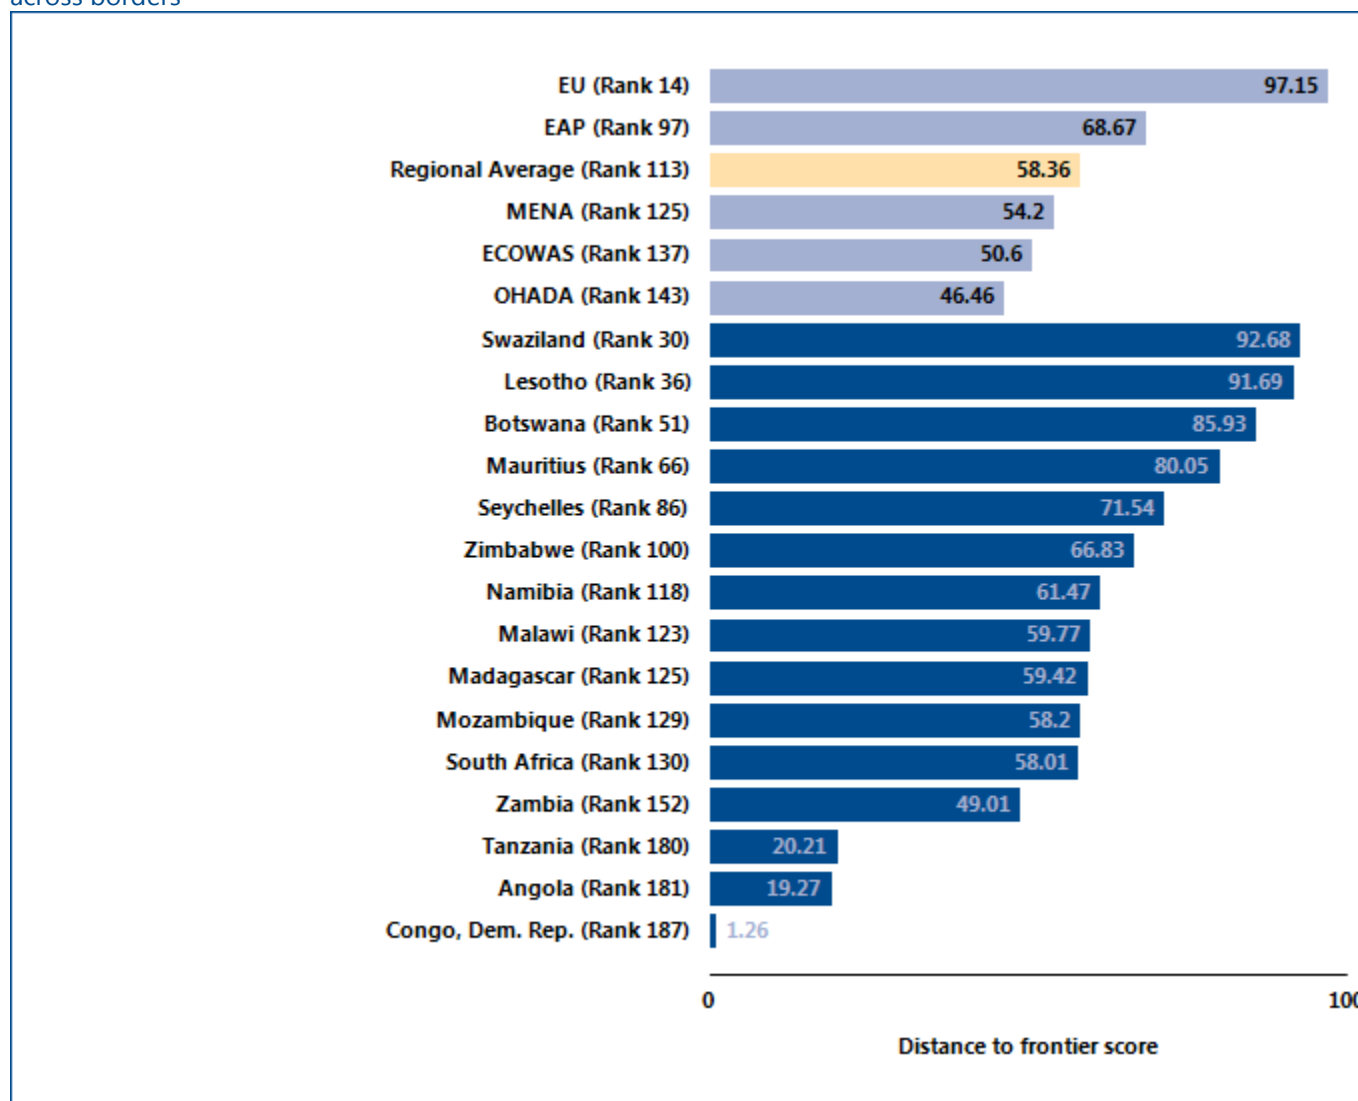

TRADING ACROSS BORDERS

Where do the region's economies stand today?

How easy it is for businesses in economies in Southern African Development Community (SADC) to export and import goods? The global rankings of these economies

on the ease of trading across borders suggest an answer (figure 9.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 9.1 How economies in Southern African Development Community (SADC) rank on the ease of trading across borders

Source: Doing Business database.

TRADING ACROSS BORDERS

The indicators reported here are for trading a shipment of goods by the most widely used mode of transport (whether sea, land, air or some combination of these). The information on the time and cost to complete export

and import is collected from local freight forwarders, customs brokers and traders. Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

TRADING ACROSS BORDERS

What are the changes over time?

In economies around the world, trading across borders as measured by *Doing Business* has become faster and easier over the years. Governments have introduced tools to facilitate trade—including single windows, risk-based inspections and electronic data interchange

systems. These changes help improve their trading environment and boost firms' international competitiveness. What trade reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 9.1)?

Table 9.1 How have economies in Southern African Development Community (SADC) made trading across borders easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2016	<i>Madagascar</i>	Madagascar reduced the time for border compliance for both exporting and importing by upgrading port infrastructure—and also reduced the time for documentary compliance for importing.
DB2016	<i>Tanzania</i>	Tanzania reduced the time for both exporting and importing by implementing the Tanzania Customs Integrated System (TANCIS), an online system for downloading and processing customs documents.
DB2016	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made trading across borders more difficult by increasing the port handling time and cost for exporting and importing.
DB2016	<i>Zambia</i>	Zambia increased the documentary and border compliance time for both exporting and importing by shifting all clearance authority to a central processing center at the initial stage of implementing a web-based customs platform (ASYCUDA World).
DB2015	<i>Tanzania</i>	Tanzania made trading across borders easier by upgrading infrastructure at the port of Dar es Salaam.
DB2014	<i>Angola</i>	Angola increased documentation requirements for cross-border trade by introducing a mandatory registration for all traders and a new license for export and import transactions.
DB2014	<i>Madagascar</i>	Madagascar made trading across borders easier by rolling out an online platform linking trade operators with government

DB year	Economy	Reform
		agencies involved in the trade process and customs clearance.
DB2014	<i>Mozambique</i>	Mozambique made trading across borders easier by implementing an electronic single-window system.
DB2014	<i>Swaziland</i>	Swaziland made trading across borders easier by streamlining the process for obtaining a certificate of origin.
DB2013	<i>Botswana</i>	In Botswana exporting and importing became faster thanks to the introduction of a scanner by the country's customs authority and an upgrade of South Africa's customs declaration system, both at the Kopfontein–Tlokweng border post.
DB2013	<i>Malawi</i>	Trading across borders in Malawi became easier thanks to improvements in customs clearance procedures and transport links between the port of Beira in Mozambique and Blantyre.
DB2013	<i>South Africa</i>	South Africa reduced the time and documents required to export and import through its ongoing customs modernization program.
DB2013	<i>Tanzania</i>	Tanzania made importing more difficult by introducing a requirement to obtain a certificate of conformity before the imported goods are shipped.
DB2012	<i>Tanzania</i>	Tanzania made trading across borders faster by implementing the Pre-Arrival Declaration (PAD) system and electronic submission of customs declaration.
DB2012	<i>Seychelles</i>	The Seychelles made trading across borders faster by introducing electronic submission of customs documents.
DB2011	<i>Angola</i>	Angola reduced the time for trading across borders by making investments in port infrastructure and administration.
DB2011	<i>Madagascar</i>	Madagascar improved communication and coordination between customs and the terminal port operators through its single-window system (GASYNET), reducing both the time and the cost to export and import.
DB2011	<i>Zambia</i>	Zambia eased trade by implementing a one-stop border post

DB year	Economy	Reform
		with Zimbabwe, launching web-based submission of customs declarations and introducing scanning machines at border posts.
DB2011	<i>Swaziland</i>	Swaziland reduced the import time of trading across borders by implementing an electronic data interchange system for customs at its border posts.
DB2010	<i>Malawi</i>	Malawi reduced delays in clearing goods by implementing a risk-based inspection system and a postdestination clearance program for preapproved traders.
DB2010	<i>Congo, Dem. Rep.</i>	In the Democratic Republic of Congo the participation of private companies in the terminal handling process at the port of Matadi has reduced cargo handling time by improving the quality of service.
DB2010	<i>Mauritius</i>	Mauritius reduced the time for trading across borders by introducing electronic submission for customs declarations and bills of lading with no requirement for physical copies.
DB2010	<i>Mozambique</i>	Mozambique reduced the time required to clear goods by introducing administrative improvements at customs.
DB2010	<i>Angola</i>	Angola made trading across borders easier through a customs improvement program that streamlined procedures and reduced the time and cost of trade.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

Source: *Doing Business* database.

ENFORCING CONTRACTS

Effective commercial dispute resolution has many benefits. Courts are essential for entrepreneurs because they interpret the rules of the market and protect economic rights. Efficient and transparent courts encourage new business relationships because businesses know they can rely on the courts if a new customer fails to pay. Speedy trials are essential for small enterprises, which may lack the resources to stay in business while awaiting the outcome of a long court dispute.

What do the indicators cover?

Doing Business measures the time and cost for resolving a standardized commercial dispute through a local first-instance court. In addition, this year it introduces a new measure, the quality of judicial processes index, evaluating whether each economy has adopted a series of good practices that promote quality and efficiency in the court system. This new index replaces the indicator on procedures, which was eliminated this year. The ranking of economies on the ease of enforcing contracts is determined by sorting their distance to frontier scores. These scores are the simple average of the distance to frontier scores for each of the component indicators

The dispute in the case study involves the breach of a sales contract between 2 domestic businesses. The case study assumes that the court hears an expert on the quality of the goods in dispute. This distinguishes the case from simple debt enforcement. To make the data comparable across economies, *Doing Business* uses several assumptions about the case:

- The dispute concerns a lawful transaction between two businesses (Seller and Buyer), both located in the economy's largest business city. For 11 economies the data are also collected for the second largest business city.
- The buyer orders custom-made goods, then fails to pay.

WHAT THE ENFORCING CONTRACTS

INDICATORS MEASURE

Time required to enforce a contract through the courts (calendar days)

- Time to file and serve the case
- Time for trial and to obtain the judgment
- Time to enforce the judgment

Cost required to enforce a contract through the courts (% of claim)

- Attorney fees
- Court fees
- Enforcement fees

Quality of judicial processes index (0-18)

- Court structure and proceedings (0-5)
- Case management (0-6)
- Court automation (0-4)
- Alternative dispute resolution (0-3)

- The value of the dispute is 200% of the income per capita or the equivalent in local currency of USD 5,000, whichever is greater.
- The seller sues the buyer before the court with jurisdiction over commercial cases worth 200% of income per capita or \$5,000.
- The seller requests a pretrial attachment to secure the claim.
- The dispute on the quality of the goods requires an expert opinion.
- The judge decides in favor of the seller; there is no appeal.
- The seller enforces the judgment through a public sale of the buyer's movable assets.

ENFORCING CONTRACTS

Where do the region’s economies stand today?

How efficient is the process of resolving a commercial dispute through the courts in economies in Southern African Development Community (SADC)? The global rankings of these economies on the ease of enforcing

contracts suggest an answer (figure 10.1). The average ranking of the region and comparator regions provide a useful benchmark.

Figure 10.1 How economies in Southern African Development Community (SADC) rank on the ease of enforcing contracts

Source: Doing Business database.

ENFORCING CONTRACTS

The indicators underlying the rankings may also be revealing. Data collected by *Doing Business* show what it takes to enforce a contract through the courts in each economy in the region: the time, the cost and quality of

judicial processes index (figure 10.2). Comparing these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Note: Higher values indicate more efficient judicial processes.

ENFORCING CONTRACTS

What are the changes over time?

Economies in all regions have improved contract enforcement in recent years. A judiciary can be improved in different ways. Higher-income economies tend to look for ways to enhance efficiency by introducing new technology. Lower-income economies often work on reducing backlogs by introducing periodic reviews to

clear inactive cases from the docket and by making procedures faster. What reforms making it easier (or more difficult) to enforce contracts has *Doing Business* recorded in Southern African Development Community (SADC) (table 10.1)?

Table 10.1 How have economies in Southern African Development Community (SADC) made enforcing contracts easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2015	<i>Mauritius</i>	Mauritius made enforcing contracts easier by introducing an electronic filing system for court users.
DB2015	<i>Seychelles</i>	Seychelles made enforcing contracts easier by establishing a commercial court, implementing and refining its case management system, introducing court-annexed mediation, and addressing scheduling conflicts within the courts.
DB2015	<i>South Africa</i>	South Africa made enforcing contracts easier by amending the monetary jurisdiction of its lower courts and introducing voluntary mediation.
DB2014	<i>Mauritius</i>	Mauritius made enforcing contracts easier by liberalizing the profession of court ushers, including by allowing registered ushers to serve as bailiffs in carrying out enforcement proceedings.
DB2012	<i>Lesotho</i>	Lesotho made enforcing contracts easier by launching a specialized commercial court.
DB2012	<i>Seychelles</i>	The Seychelles expanded the jurisdiction of the lower court, increasing the time required to enforce contracts.
DB2011	<i>Zambia</i>	Zambia improved contract enforcement by introducing an electronic case management system in the courts that provides electronic referencing of cases, a database of laws, real-time court reporting and public access to court records.
DB2011	<i>Malawi</i>	Malawi simplified the enforcement of contracts by raising the ceiling for commercial claims that can be brought to the magistrates court.
DB2011	<i>Mauritius</i>	Mauritius speeded up the resolution of commercial disputes by recruiting more judges and adding more courtrooms.

DB year	Economy	Reform
DB2010	<i>Mauritius</i>	Mauritius made enforcing contracts easier by setting up a specialized commercial division in its supreme court.
DB2010	<i>Botswana</i>	Botswana made resolution of commercial disputes more efficient by introducing case management and improving the use of information technology.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

RESOLVING INSOLVENCY

A robust bankruptcy system functions as a filter, ensuring the survival of economically efficient companies and reallocating the resources of inefficient ones. Fast and cheap insolvency proceedings result in the speedy return of businesses to normal operation and increase returns to creditors. By clarifying the expectations of creditors and debtors about the outcome of insolvency proceedings, well-functioning insolvency systems can facilitate access to finance, save more viable businesses and sustainably grow the economy.

What do the indicators cover?

Doing Business studies the time, cost and outcome of insolvency proceedings involving domestic legal entities. These variables are used to calculate the recovery rate, which is recorded as cents on the dollar recovered by secured creditors through reorganization, liquidation or debt enforcement (foreclosure or receivership) proceedings. To determine the present value of the amount recovered by creditors, *Doing Business* uses the lending rates from the International Monetary Fund, supplemented with data from central banks and the Economist Intelligence Unit.

In addition, *Doing Business* evaluates the adequacy and integrity of the existing legal framework applicable to liquidation and reorganization proceedings through the strength of insolvency framework index. The index tests whether economies adopted internationally accepted good practices in four areas: commencement of proceedings, management of debtor's assets, reorganization proceedings and creditor participation.

The ranking of economies on the ease of resolving insolvency is determined by sorting their distance to frontier scores for resolving insolvency. These scores are the simple average of the distance to frontier scores for the recovery rate and the strength of insolvency framework index. The Resolving Insolvency indicator does not measure insolvency proceedings of individuals and financial institutions. The data are derived from questionnaire responses by local insolvency practitioners and verified through a study of laws and regulations as well as public information on bankruptcy systems.

WHAT THE RESOLVING INSOLVENCY INDICATORS MEASURE

Time required to recover debt (years)

Measured in calendar years

Appeals and requests for extension are included

Cost required to recover debt (% of debtor's estate)

Measured as percentage of estate value

Court fees

Fees of insolvency administrators

Lawyers' fees

Assessors' and auctioneers' fees

Other related fees

Outcome

Whether business continues operating as a going concern or business assets are sold piecemeal

Recovery rate for creditors

Measures the cents on the dollar recovered by secured creditors

Outcome for the business (survival or not) determines the maximum value that can be recovered

Official costs of the insolvency proceedings are deducted

Depreciation of furniture is taken into account

Present value of debt recovered

Strength of insolvency framework index (0-16)

Sum of the scores of four component indices:

Commencement of proceedings index (0-3)

Management of debtor's assets index (0-6)

Reorganization proceedings index (0-3)

Creditor participation index (0-4)

RESOLVING INSOLVENCY

Where do the region's economies stand today?

How efficient are insolvency proceedings in economies in Southern African Development Community (SADC)? The global rankings of these economies on the ease of resolving insolvency suggest an answer (figure 11.1). The average ranking of the region and comparator regions

provide a useful benchmark for assessing the efficiency of insolvency proceedings. Speed, low costs and continuation of viable businesses characterize the top-performing economies.

Figure 11.1 How economies in Southern African Development Community (SADC) rank on the ease of resolving insolvency

Source: Doing Business database.

RESOLVING INSOLVENCY

The indicators underlying the rankings may be more revealing. Data collected by *Doing Business* show the average recovery rate and the average strength of insolvency framework index (figure 11.2). Comparing

these indicators across the region and with averages both for the region and for comparator regions can provide useful insights.

Figure 11.2 How efficient is the insolvency process in economies in Southern African Development Community (SADC)

Recovery Rate (0–100)

Source: *Doing Business* database.

Total Strength of Insolvency Framework index (0-16)

Source: *Doing Business* database.

* Indicates a “no practice” mark. See the data notes for details. If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a “no practice” mark. Similarly, an economy receives a “no practice” or “not possible” mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a “no practice” mark puts the economy at the bottom of the ranking on the relevant indicator.

Source: *Doing Business* database.

Note: Higher values indicate insolvency legislation that is better designed for rehabilitating viable firms and liquidating nonviable ones.

RESOLVING INSOLVENCY

What are the changes over time?

A well-balanced bankruptcy system distinguishes companies that are financially distressed but economically viable from inefficient companies that should be liquidated. But in some insolvency systems even viable businesses are liquidated. This is starting to

change. Many recent reforms of bankruptcy laws have been aimed at helping more of the viable businesses survive. What insolvency reforms has *Doing Business* recorded in Southern African Development Community (SADC) (table 11.1)?

Table 11.1 How have economies in Southern African Development Community (SADC) made resolving insolvency easier—or not?

By *Doing Business* report year DB2011 to DB2016

DB year	Economy	Reform
DB2015	<i>Mozambique</i>	Mozambique made resolving insolvency easier by introducing a court-supervised reorganization procedure and a mechanism for prepackaged reorganizations, by clarifying rules on the appointment and qualifications of insolvency administrators and by strengthening creditors' rights.
DB2015	<i>Seychelles</i>	The Seychelles made resolving insolvency easier by introducing a reorganization procedure, provisions on the avoidance of undervalued transactions and the possibility to request post-commencement financing during the reorganization.
DB2014	<i>Mauritius</i>	Mauritius made resolving insolvency easier by introducing guidelines for out-of-court restructuring and standardizing the process of registration, suspension and removal of insolvency practitioners.
DB2014	<i>Tanzania</i>	Tanzania made resolving insolvency easier through new rules clearly specifying the professional requirements and remuneration for insolvency practitioners, promoting reorganization proceedings and streamlining insolvency proceedings.
DB2014	<i>Congo, Dem. Rep.</i>	The Democratic Republic of Congo made resolving insolvency easier by adopting the OHADA Uniform Act Organizing Collective Proceedings for Wiping Off Debts. The law allows an insolvent debtor to file for preventive settlement, legal redress or liquidation and sets out clear rules on the steps and procedures for each of the options available.
DB2013	<i>Zambia</i>	Zambia strengthened its insolvency process by introducing further qualification requirements for receivers and liquidators and by establishing specific duties and remuneration rules for them.

DB year	Economy	Reform
DB2012	<i>Malawi</i>	Malawi adopted new rules providing clear procedural requirements and time frames for winding up a company.
DB2012	<i>Namibia</i>	Namibia adopted a new company law that established clear procedures for liquidation.
DB2012	<i>South Africa</i>	South Africa introduced a new reorganization process to facilitate the rehabilitation of financially distressed companies.
DB2010	<i>Mauritius</i>	Mauritius enhanced its insolvency system through a new law introducing a rehabilitation procedure for companies as an alternative to winding up, defining the rights and obligations of creditors and debtors and setting out sanctions for those who abuse the system.
DB2010	<i>Malawi</i>	Malawi enhanced its insolvency process through a new law limiting the liquidator's fees.

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at <http://www.doingbusiness.org>.

DISTANCE TO FRONTIER AND EASE OF DOING BUSINESS RANKING

Doing Business presents results for two aggregate measures: the distance to frontier score and the ease of doing business ranking, which is based on the distance to frontier score. The ease of doing business ranking compares economies with one another; the distance to frontier score benchmarks economies with respect to regulatory best practice, showing the absolute distance to the best performance on each *Doing Business* indicator. When compared across years, the distance to frontier score shows how much the regulatory environment for local entrepreneurs in an economy has changed over time in absolute terms, while the ease of doing business ranking can show only how much the regulatory environment has changed relative to that in other economies.

Distance to Frontier

The distance to frontier score captures the gap between an economy's performance and a measure of best practice across the entire sample of 36 indicators for 10 *Doing Business* topics (the labor market regulation indicators are excluded). For starting a business, for example, the former Yugoslav Republic of Macedonia and New Zealand have the smallest number of procedures required (1), and New Zealand the shortest time to fulfill them (0.5 days). Slovenia has the lowest cost (0.0), and Australia, Colombia and 103 other economies have no paid-in minimum capital requirement (table 14.1 in the *Doing Business 2016* report).

Calculation of the distance to frontier score

Calculating the distance to frontier score for each economy involves two main steps. In the first step individual component indicators are normalized to a common unit where each of the 36 component indicators y (except for the total tax rate) is rescaled using the linear transformation $(\text{worst} - y)/(\text{worst} - \text{frontier})$. In this formulation the frontier represents the best performance on the indicator across all economies since 2005 or the third year in which data for the indicator were collected. Both the best performance and the worst performance are established every five years based on the *Doing Business* data for the year in which they are established, and remain at that level for the five years regardless of any changes in data in interim years. Thus an economy may set the frontier for an indicator

even though it is no longer at the frontier in a subsequent year.

For scores such as those on the strength of legal rights index or the quality of land administration index, the frontier is set at the highest possible value. For the total tax rate, consistent with the use of a threshold in calculating the rankings on this indicator, the frontier is defined as the total tax rate at the 15th percentile of the overall distribution for all years included in the analysis up to and including *Doing Business 2015*. For the time to pay taxes the frontier is defined as the lowest time recorded among all economies that levy the three major taxes: profit tax, labor taxes and mandatory contributions, and value added tax (VAT) or sales tax. For the different times to trade across borders, the frontier is defined as 1 hour even though in many economies the time is less than that.

In the same formulation, to mitigate the effects of extreme outliers in the distributions of the rescaled data for most component indicators (very few economies need 700 days to complete the procedures to start a business, but many need 9 days), the worst performance is calculated after the removal of outliers. The definition of outliers is based on the distribution for each component indicator. To simplify the process two rules were defined: the 95th percentile is used for the indicators with the most dispersed distributions (including minimum capital, number of payments to pay taxes, and the time and cost indicators), and the 99th percentile is used for number of procedures. No outlier is removed for component indicators bound by definition or construction, including legal index scores (such as the depth of credit information index, extent of conflict of interest regulation index and strength of insolvency framework index) and the recovery rate (figure 14.1).

In the second step for calculating the distance to frontier score, the scores obtained for individual indicators for each economy are aggregated through simple averaging into one distance to frontier score, first for each topic and then across all 10 topics: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency. More complex aggregation methods—such as principal components and unobserved components—yield a ranking nearly

identical to the simple average used by *Doing Business*⁴. Thus *Doing Business* uses the simplest method: weighting all topics equally and, within each topic, giving equal weight to each of the topic components⁵.

An economy's distance to frontier score is indicated on a scale from 0 to 100, where 0 represents the worst performance and 100 the frontier. All distance to frontier calculations are based on a maximum of five decimals. However, indicator ranking calculations and the ease of doing business ranking calculations are based on two decimals.

The difference between an economy's distance to frontier score in any previous year and its score in 2015 illustrates the extent to which the economy has closed the gap to the regulatory frontier over time. And in any given year the score measures how far an economy is from the best performance at that time.

Treatment of the total tax rate

The total tax rate component of the paying taxes indicator set enters the distance to frontier calculation in a different way than any other indicator. The distance to frontier score obtained for the total tax rate is transformed in a nonlinear fashion before it enters the distance to frontier score for paying taxes. As a result of the nonlinear transformation, an increase in the total tax rate has a smaller impact on the distance to frontier score for the total tax rate—and therefore on the distance to frontier score for paying taxes—for economies with a below-average total tax rate than it would have had before this approach was adopted in *Doing Business 2015* (line B is smaller than line A in figure 14.2 of the *Doing Business 2016* report). And for economies with an extreme total tax rate (a rate that is very high relative to the average), an increase has a greater impact on both these distance to frontier scores

than it would have had before (line D is bigger than line C in figure 14.2 of the *Doing Business 2016* report).

The nonlinear transformation is not based on any economic theory of an "optimal tax rate" that minimizes distortions or maximizes efficiency in an economy's overall tax system. Instead, it is mainly empirical in nature. The nonlinear transformation along with the threshold reduces the bias in the indicator toward economies that do not need to levy significant taxes on companies like the *Doing Business* standardized case study company because they raise public revenue in other ways—for example, through taxes on foreign companies, through taxes on sectors other than manufacturing or from natural resources (all of which are outside the scope of the methodology). In addition, it acknowledges the need of economies to collect taxes from firms.

Calculation of scores for economies with 2 cities covered

For each of the 11 economies in which *Doing Business* collects data for the second largest business city as well as the largest one, the distance to frontier score is calculated as the population-weighted average of the distance to frontier scores for these two cities (table 13.1). This is done for the aggregate score, the scores for each topic and the scores for all the component indicators for each topic.

⁴ See Djankov, Manraj and others (2005). Principal components and unobserved components methods yield a ranking nearly identical to that from the simple average method because both these methods assign roughly equal weights to the topics, since the pairwise correlations among indicators do not differ much. An alternative to the simple average method is to give different weights to the topics, depending on which are considered of more or less importance in the context of a specific economy.

⁵ For getting credit, indicators are weighted proportionally, according to their contribution to the total score, with a weight of 60% assigned to the strength of legal rights index and 40% to the depth of credit information index. Indicators for all other topics are assigned equal weights

Table 13.1 Weights used in calculating the distance to frontier scores for economies with 2 cities covered

Economy	City	Weight (%)
Bangladesh	Dhaka	78
	Chittagong	22
Brazil	São Paulo	61
	Rio de Janeiro	39
China	Shanghai	55
	Beijing	45
India	Mumbai	47
	Delhi	53
Indonesia	Jakarta	78
	Surabaya	22
Japan	Tokyo	65
	Osaka	35
Mexico	Mexico City	83
	Monterrey	17
Nigeria	Lagos	77
	Kano	23
Pakistan	Karachi	65
	Lahore	35
Russian Federation	Moscow	70
	St. Petersburg	30
United States	New York	60
	Los Angeles	40

Economies that improved the most across 3 or more *Doing Business* topics in 2014/15

Doing Business 2016 uses a simple method to calculate which economies improved the ease of doing business the most. First, it selects the economies that in 2014/15

implemented regulatory reforms making it easier to do business in 3 or more of the 10 topics included in this year's aggregate distance to frontier score. Changes making it more difficult to do business are subtracted from the total number of those making it easier to do business. Twenty-four economies meet this criterion: Armenia; Azerbaijan; Benin; Costa Rica; Côte d'Ivoire; Cyprus; Hong Kong SAR, China; Indonesia; Jamaica; Kazakhstan; Kenya; Lithuania; Madagascar; Mauritania; Morocco; Romania; the Russian Federation; Rwanda; Senegal; Togo; Uganda; the United Arab Emirates; Uzbekistan; and Vietnam. Second, *Doing Business* sorts these economies on the increase in their distance to frontier score from the previous year using comparable data.

Selecting the economies that implemented regulatory reforms in at least three topics and had the biggest improvements in their distance to frontier scores is intended to highlight economies with ongoing, broad-based reform programs. The improvement in the distance to frontier score is used to identify the top improvers because this allows a focus on the absolute improvement—in contrast with the relative improvement shown by a change in rankings—that economies have made in their regulatory environment for business.

Ease of *Doing Business* ranking

The ease of doing business ranking ranges from 1 to 189. The ranking of economies is determined by sorting the aggregate distance to frontier scores, rounded to 2 decimals.

Doing Business 2016 is the 13th in a series of annual reports investigating the regulations that enhance business activity and those that constrain it. The report provides quantitative indicators covering 11 areas of the business environment in 189 economies. The goal of the *Doing Business* series is to provide objective data for use by governments in designing sound business regulatory policies and to encourage research on the important dimensions of the regulatory environment for firms.
